ENGINEERING REPORT

WAPK-CD, Bristol (VA)/Kingsport (TN), Channel 16

ENGINEERING AMENDMENT TO 0000034342

It has been determined that the pending WAPK-CD channel 16 minor change application 0000034342 is mutually exclusive with the also pending application of WXII-TV, Winston-Salem, NC channel 16 (0000034697). Since the mutual exclusivity with the WAPK-CD application results from predicted received interference only caused by the facility of 0000034697, the removal of the MX situation (as it relates to 0000034697) can be accomplished by the acceptance of the level of received interference that is predicted to be caused to the WAPK-CD facility.

By this amendment, the Applicant of 0000034342 accepts the predicted interference levels caused to the 0000034342 facility by the facility currently proposed by 0000034697 (and also from the CP facility of WXII-TV 0000024623 if deemed necessary by the FCC) in order to remove 0000034342 from the mutual exclusivity with WXII-TV's proposed and CP facilities. (The level of predicted increased received interference to 0000034342 is, in both cases, greater than the 0.5 % de minimis level permitted and less than 1.3 %. Therefore, the Applicant accepts an increased received interference level of up to 1.3 % from both 0000034697 and 0000024623.)

All accepted interference levels are based on the current TVStudy program software (version 2.2.4) or a later version deemed acceptable for use by the FCC.
