

### Antenna Structure Registration (ASR) Number and Tower Height

The applicant proposes to side-mount the antenna specified herein on an existing tower such that the overall height of the tower is unaffected. The existing tower is registered under ASR 1219481. Unfortunately, the *Support Structure Height* data field on the existing tower's ASR and in the tower's underlying FAA Study No. 2000-ACE-0930-OE is blank. Pre-filling the FCC Form 2100 with the ASR data, results in a support structure height of 0.0 meters and causes a Form validation error.

Accordingly, the Applicant has completed FCC Form 2100 in a manner that allows for the Form validation and the filing of the instant request for Special Temporary Authority. The Applicant requests no change in the overall height of existing tower ASR 1219481.
