

DISPLACEMENT QUALIFICATION OF W44DH-D AND

WAIVER REQUEST FOR DISPLACEMENT APPLICATION

W44DH-D is currently licensed on out of the core channel 44, thus by definition displaced. As shown in the included Pre-Transition TVStudy interference analysis, the proposed W44DH-D facility in CH 33 causes impermissible interference of 4.41% to Full Service station WRUA DT on CH 33.

As shown in the included Post Transition TVstudy interference analysis, the proposed W44DH-D facility in CH 33 is not predicted to cause impermissible interference to any Full Service or Class A TV stations in their post-repack channels, thus this displacement application and its grant is conditioned to WRUA DT having completed its transition to its post repack channel 16. A waiver of the FCC Rules is requested to make this application and its grant conditioned to WRUA DT transitioning to Post Transition channel.

The TVStudies of this application were done using a cell size of 0.5 km and Profile Increment of 0.1 km.
