

**STATEMENT OF JOHN E. HIDLE, P.E.
IN SUPPORT OF AN AMENDMENT TO AN
APPLICATION FOR A MINOR MODIFICATION OF A
POST REPACK CONSTRUCTION PERMIT
FILE # 0000027762
WTAT-TV - CHARLESTON, SOUTH CAROLINA
APPLICATION FILE # 0000034503
DTV - CH. 17 - 900 kW - 583.3 m HAAT**

Prepared for: WTAT LICENSEE, LLC

I am a Consulting Engineer, an employee in the firm of Carl T. Jones Corporation, with offices located in Springfield, Virginia. My education and experience are a matter of record with the Federal Communications Commission. I am a Licensed Professional Engineer in the Commonwealth of Virginia, License No. 7418, and in the State of New York, License No. 63418.

GENERAL

This office has been authorized by WTAT LICENSEE, LLC, licensee of WTAT-TV, channel 24, facility ID number 416, licensed to Charleston, South Carolina, to prepare this statement, FCC Form 2100, Schedule A, its technical sections, and the associated exhibits in support of an amendment to its application for a minor modification of its post-reassignment construction permit, File # 0000027762, that authorizes WTAT-TV to use channel 17 for its post-reassignment broadcasting. The instant amendment to the application for a minor modification, File # 0000034503 proposes only to decrease WTAT-TV's ERP to 900 kW in order to comply with §73.622(f)(5).

**STATEMENT OF JOHN E. HIDLE, P.E.
WTAT-TV - Charleston, South Carolina
PAGE 2**

DETERMINATION OF WTAT-TV's COMPLIANCE WITH SECTION 73.622(f)(5)

The proposed 900 kW ERP exceeds the maximum allowed for the antenna HAAT of 583.3 meters permitted by §73.622(f)(8)(I). However, §73.622(f)(5) permits the maximum ERP to be exceeded in order to provide the same geographic coverage area as the largest station within the market. As shown in the attached exhibits, the total coverage area within the proposed WTAT-TV noise limited service contour is 20,971.4 square kilometers , which does not exceed the noise limited coverage area of the licensed WTAT-TV facility (21,067.9 sq km, Channel 24, BLCDT-20090612AHS). Therefore, the 900 kW ERP specified herein for WTAT-TV is in compliance with §73.622(f)(5) of the Federal Communications Commission's Rules.

DIRECTIONAL ANTENNA

The applicant will utilize its existing authorized antenna, a Dielectric model TUD-P5SP-16/48-1-B horizontally polarized broad-band panel type directional transmitting antenna with its center of radiation located at a height above ground of 580.4 meters, and a height above average terrain of 583.3 meters. The antenna manufacturer's horizontal plane azimuth radiation pattern shown and tabulated in exhibit 2. The manufacturer's vertical plane elevation radiation pattern, illustrating the antenna's radiation characteristics above and below the horizontal plane is shown and tabulated in Exhibit 3.

PREDICTED COVERAGE CONTOURS

The predicted coverage contours were calculated in accordance with the method described in Section 73.625(b) of the Rules, utilizing the appropriate F(50,90) propagation curves (47 CFR Section 73.699, Figure 9), proposed Effective Radiated Power, and

**STATEMENT OF JOHN E. HIDLE, P.E.
WTAT-TV - Charleston, South Carolina
PAGE 3**

antenna height above average terrain as determined for each profile radial. The average terrain on the eight cardinal radials from 3 kilometers to 16 kilometers from the site, was determined using the NED Three Second US Terrain Database as permitted in the FCC Rules. The antenna site elevation and coordinates were determined from FCC antenna registration data. Exhibit 1 shows the predicted Noise Limited (39.04 dBu) contour, and the principal community (48 dBu) contour. The 48 dBu contour completely encompasses the principal community of license, Charleston, South Carolina.

ALLOCATION CONSIDERATIONS

Post-Transition DTV Considerations

A study was performed, using the FCC's software, *tvstudy*, v. 2.2.5, to determine if the instant application for construction permit is predicted to cause new prohibited interference to post reassignment DTV stations, construction permits, DTV allotments or Class A DTV stations. The study results, shown in Appendix B, indicate that the instant application for construction permit is predicted to cause no new interference exceeding 0.5% to the populations served by any post reassignment DTV station, construction permit, allotment or Class A DTV stations. (See Appendix B)

International DTV Considerations

The WTAT-TV site is located neither within the Canadian nor the Mexican coordination zone, Therefore no international considerations are necessary.

BLANKETING AND INTERMODULATION INTERFERENCE

Other broadcast and non-broadcast facilities are either co-located with, or located within 10 km of the proposed WTAT-TV site. The applicant does recognize its

**STATEMENT OF JOHN E. HIDLE, P.E.
WTAT-TV - Charleston, South Carolina
PAGE 4**

responsibility to remedy complaints of interference that might result from this proposal in accordance with applicable Rules.

RADIO FREQUENCY IMPACT

The FCC's guidelines and procedures for evaluating environmental effects of radio frequency (RF) emissions are generally based on recommendations by the National Council on Radiation Protection and Measurements (NCRP) in NCRP Report No. 86 (1986) and by the American National Standards Institute and the Institute of Electrical and Electronic Engineers, LLC (IEEE) in ANSI/IEEE C95.1-1992 (IEEE C95.1-1991). The guidelines define a maximum permissible exposure (MPE) level for occupational or "controlled" situations, and for "uncontrolled" environments that apply in all other cases that might affect the general public. The FCC Office of Engineering and Technology's technical bulletin No. 65 entitled, "Evaluating Compliance with FCC Guidelines for Human Exposure to Radio Frequency Electromagnetic Fields" (Edition 97-01, August 1997), provides assistance to determine whether FCC-regulated transmitting facilities, operations or devices comply with guidelines for human exposure to radio frequency electromagnetic fields as adopted by the Commission in 1996. OET Bulletin No. 65 contains the technical information necessary to evaluate compliance with the FCC's policies and guidelines.

The Maximum Permitted Exposure (MPE) level for broadcast facilities that operate on a frequency between 30 MHZ and 300 MHZ is 200 microwatts per centimeter squared ($\mu\text{W}/\text{cm}^2$) for an "uncontrolled" environment, and is 1000 microwatts per centimeter squared ($\mu\text{W}/\text{cm}^2$) for a "controlled" environment. The MPE level for broadcast facilities that operate on a frequency between 300 MHZ and 1500 MHZ, primarily UHF TV stations,

**STATEMENT OF JOHN E. HIDLE, P.E.
WTAT-TV - Charleston, South Carolina
PAGE 5**

is determined, in $\mu\text{W}/\text{cm}^2$, for an "uncontrolled" environment by dividing the operating frequency in MHZ by 1.5, and is similarly determined for a "controlled" environment by dividing the operating frequency in MHZ by 0.3.

The predicted emissions of WTAT-TV must be considered, in addition to predicted emissions from any other proposed or existing stations at the site. For WTAT-TV, which will operate on television Channel 17 (488-494 MHZ), the MPE is 327.33 microwatts per centimeter squared ($\mu\text{W}/\text{cm}^2$) in an "uncontrolled" environment and 1,636.7 $\mu\text{W}/\text{cm}^2$ in a "controlled" environment. The proposed WTAT-TV facility will operate with a maximum ERP of 900 kW from an horizontally polarized directional transmitting antenna with a centerline height of 580.4 meters above ground level (AGL). Considering a predicted vertical plane relative field factor of 0.300 the WTAT-TV facility is predicted to produce a power density at two meters above ground level of 8.089 $\mu\text{W}/\text{cm}^2$, which is 2.47% of the FCC guideline value for an "uncontrolled" environment, and 0.49% of the FCC's guideline value for "controlled" environments. There are two other full-power DTV broadcast facilities that are located at the WTAT-TV site. Therefore, the total estimated percentage of the ANSI value at the proposed site, including the cumulative radiation from all authorizations within the relevant proximity, is 6.05% of the limit applicable to "uncontrolled" environments, and 1.21% of the limit for "controlled" environments. (See Appendix A)

OCCUPATIONAL SAFETY

The licensee of WTAT-TV is committed to the protection of station personnel and/or tower contractors working in the vicinity of the WTAT-TV antenna, and is committed to

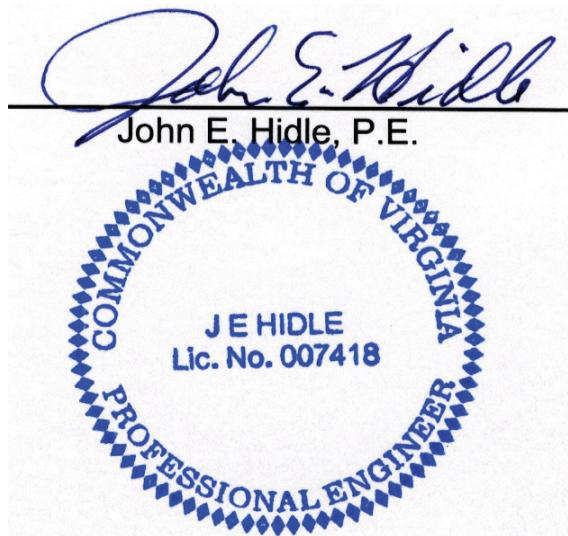

**STATEMENT OF JOHN E. HIDLE, P.E.
WTAT-TV - Charleston, South Carolina
PAGE 6**

reducing power or ceasing operation during times of maintenance of the transmission systems, when necessary, to ensure protection to personnel.

SUMMARY

It is submitted that the instant amendment to its application, file # 0000034503, for a minor modification of its post-reassignment channel 17 construction permit, file # 0000027762, to decrease WTAT-TV's ERP to 900 kW, as described herein, complies with the Rules, Regulations and relevant Policies of the Federal Communications Commission. This statement, FCC Form 2100, its technical sections, and the attached exhibits were prepared by me or under my direct supervision and are believed to be true and correct to the best of my knowledge and belief.

TOTAL PERCENTAGE OF FCC GUIDELINE VALUE =										6.05%

* For television stations a very conservative vertical relative field factor of 0.3 was assumed pursuant to OET Bulletin 65.

WTAT-TV - CHARLESTON, SOUTH CAROLINA

Appendix B - Longley-Rice Interference Analysis

May, 2018

tvstudy v2.2.5 (4uoc83)
 Database: localhost, Study: WTAT 17 AP 900KW TUDP5, Model: Longley-Rice
 Start: 2018.05.10 09:27:39

Study created: 2018.05.10 09:27:39

Study build station data: LMS TV 2018-05-10

Proposal: WTAT-TV D17 DT APP CHARLESTON, SC
 File number: WTAT 17 AP 900KW TUDP5
 Facility ID: 416
 Station data: User record
 Record ID: 292
 Country: U.S.
 Zone: II

Search options:

Non-U.S. records included

Baseline record excluded if station has CP

Stations potentially affected by proposal:
