

TECHNICAL SUMMARY

Low Power Television Station K39EF-D
Ashland, Oregon
Channel 14, 0.50kW ERP, 1183 AMSL

This application is a Special Displacement Window application for K39EF-D, currently licensed for operation on Channel 39 in Ashland, OR, Facility ID:25357.

K39EF-D is eligible to file in the Special Displacement Window since it has been licensed and operating prior to April 13, 2017, and is on a channel that has been repurposed for use by 600 MHz Band wireless services.

An interference analysis for the proposed facilities was conducted using the FCC's *TVStudy* software.

The results show no interference either caused or received that exceed the FCC limits for protected facilities based upon current and post-transition environments.

A copy of the analysis is attached as an exhibit.
