

No Environmental Impact

The change in channel proposed in this application will have no significant environmental impact and does not require an environmental impact evaluation.

The antenna will be mounted on a tower at the station's existing tower location. The existing tower will be replaced with a more up-to-date structure. The coordinates and overall height of the structure will not change, and lighting will remain the same. There will be no construction or excavation more than 30 feet beyond the boundary of the current tower property. Therefore, the replacement will not require a new environmental assessment, pursuant to *National Environmental Policy Act Compliance for Proposed Tower Registration*, 27 FCC Rcd 16700 (2011) at par. 53.

Exposure of humans to non-ionizing radiation is addressed in the separately attached Engineering Statement.
