

Environmental Statement  
Reno Channel 2  
January 15, 2018

The applicant proposes to operate at 3,000 watts circularly polarized with a CA2-CP at a height of 35 meters above ground. This proposal is well within the FCC's guidelines for both controlled and uncontrolled radiation exposure. Nevertheless, the applicant will ensure that placards warning of radiation exposure are posted in and around the site always. Also, the station staff will be trained how to cease transmission if anyone climbs the tower.
