

**AMENDMENT TO PENDING CONSTRUCTION PERMIT APPLICATION**  
**FILE #0000029428**  
**K46AI-D Durant, Oklahoma**  
**September 18, 2018**

OETA hereby requests to amend its pending Displacement Filing Window application for TV Translator station K46AI-D at Durant, OK.

The originally filed displacement window application specified the “stringent” emission mask. However, a mutually exclusive adjacent channel application was filed in the window which resulted in impermissible interference on Channel 27 using the stringent mask.

Therefore, OETA would like to amend its pending displacement filing window construction permit application to specify the Full Service Emission mask in order to eliminate any adjacent channel interference to any mutually exclusive applications.

The specification of the full service emission mask should enable the pending application to be in compliance with the processing and interference standards as outlined in the Public Notice and eliminate the mutually exclusive situation.

All other technical parameters for the pending displacement application remain unchanged.
