

## Attachment in Support of Requested Waiver Extension

This application continues to request an STA for the station that has previously been approved, originally in BSTA – 20110516APB and more recently approved in LMS 0000048940 to operate under a waiver of the rules with power in excess of the limit specified in the Commission's rules. Attachments to previous STA applications document the extraordinary circumstances justifying this request and continues to support this request for extension. Following the grant of the original STA and implementation of the power it authorized, hundreds of viewers were again able to view KCSO-LD off the-air and for the first time since the station transitioned to digital. This same situation continues at the station's new location.

Following the grant of Permit File Number 0000030101, those same viewers have been able to continue to view KCSO-LD from its new transmitter location without a single complaint of interference. Surveys and data from off-the-air viewers show that the number of previous analog viewers reporting difficulty in receiving digital KCSO-LD's unique Spanish language programming has been reduced by two-thirds.
