

**STATEMENT OF JOHN E. HIDLE, P.E.
IN SUPPORT OF AN APPLICATION FOR
A MINOR MODIFICATION OF A
POST REPACK CONSTRUCTION PERMIT
FILE # 0000033734
KPTH - SIOUX CITY, IOWA
DTV - CH. 30 - 871 kW - 613 m HAAT**

Prepared for: KPTH LICENSEE, LLC

I am a Consulting Engineer, an employee in the firm of Carl T. Jones Corporation, with offices located in Springfield, Virginia. My education and experience are a matter of record with the Federal Communications Commission. I am a Licensed Professional Engineer in the Commonwealth of Virginia, No. 7418, and in New York State, No. 63418.

GENERAL

This office has been authorized by KPTH LICENSEE, LLC, licensee of KPTH, channel 49, facility ID number 77451, licensed to Sioux City, Iowa, to prepare this statement, FCC Form 2100, Schedule A, its technical sections, and the associated exhibits in support of an application for a minor modification of its post-reassignment construction permit, file # 0000033734, that authorizes KPTH to use channel 30 for its post-reassignment broadcasting. The instant application proposes only to decrease KPTH's ERP to 871 kW. The reason for the reduction from 1000 kW is that the power handling safety margin of the transmission line is exceeded if the ERP exceeds 871 kW.

**STATEMENT OF JOHN E. HIDLE, P.E.
KPTH - Sioux City, Iowa
PAGE 2**

DETERMINATION OF THE “LARGEST STATION IN THE MARKET”

It appears from an analysis of the stations that are licensed to communities located in the Sioux City, Iowa Designated Market Area (DMA) that the largest station in geographic area is KCAU-TV, channel 9, Sioux City, Iowa with a predicted coverage area of 51,685 square kilometers. The instant application to decrease KPTH's ERP to 871 kW results in a predicted coverage area of 41,163 square kilometers. Clearly KPTH is entitled, according to Section 73.622(f)(5), to the proposed ERP of 871 kW.

DIRECTIONAL ANTENNA

The applicant has installed the authorized Dielectric model TFU-20ETT/VP-R P210 elliptically polarized directional transmitting antenna with its center of radiation located at a height above ground of 597.7 meters, and a height above average terrain of 613 meters. The antenna manufacturer's horizontal plane azimuth radiation pattern for the horizontally polarized component is shown and tabulated in exhibit 2. The manufacturer's horizontal plane azimuth pattern for the vertically polarized component is shown and tabulated in exhibit 3. The manufacturer's vertical plane elevation radiation pattern, illustrating the antenna's radiation characteristics above and below the horizontal plane is shown and tabulated in Exhibit 4.

The former channel 49 analog antenna has been removed from the tower structure and the new channel 30 antenna has been installed in its place, while maintaining the overall structure height of 1012.2 meters Above Mean Sea Level (AMSL). (See ASR #1057963)

KPTH - Sioux City, Iowa
PAGE 3**

PREDICTED COVERAGE CONTOURS

The predicted coverage contours were calculated in accordance with the method described in Section 73.625(b) of the Rules, utilizing the appropriate F(50,90) propagation curves (47 CFR Section 73.699, Figure 9), proposed Effective Radiated Power, and antenna height above average terrain as determined for each profile radial. The average terrain on the eight cardinal radials from 3 kilometers to 16 kilometers from the site, was determined using the NED Three Second US Terrain Database as permitted in the FCC Rules. The antenna site elevation and coordinates were determined from FCC antenna registration data. Exhibit 1 shows the predicted Noise Limited (40.32 dBu) contour, and the principal community (48 dBu) contour. The 48 dBu contour completely encompasses the principal community of license, Sioux City, Iowa.

ALLOCATION CONSIDERATIONS

Post-Transition DTV Considerations

A study was performed, using the FCC's software, *tvstudy*, v. 2.2.5, to determine if the instant application for construction permit is predicted to cause new prohibited interference to post reassignment DTV stations, construction permits, DTV allotments or Class A DTV stations. The study results, shown in Appendix B, indicate that the instant application for construction permit is predicted to cause no new interference exceeding 0.5% to the populations served by any post reassignment DTV station, construction permit, allotment or Class A DTV stations. (See Appendix B)

The KPTH site is located neither within the Canadian nor the Mexican coordination zone, Therefore no international considerations are necessary.

STATEMENT OF JOHN E. HIDLE, P.E.
KPTH - Sioux City, Iowa
PAGE 4

BLANKETING AND INTERMODULATION INTERFERENCE

Other broadcast and non-broadcast facilities are either co-located with, or located within 10 km of the proposed KPTH site. The applicant does recognize its responsibility to remedy complaints of interference that might result from this proposal in accordance with applicable Rules.

RADIO FREQUENCY IMPACT

The FCC's guidelines and procedures for evaluating environmental effects of radio frequency (RF) emissions are generally based on recommendations by the National Council on Radiation Protection and Measurements (NCRP) in NCRP Report No. 86 (1986) and by the American National Standards Institute and the Institute of Electrical and Electronic Engineers, LLC (IEEE) in ANSI/IEEE C95.1-1992 (IEEE C95.1-1991). The guidelines define a maximum permissible exposure (MPE) level for occupational or "controlled" situations, and for "uncontrolled" environments that apply in all other cases that might affect the general public. The FCC Office of Engineering and Technology's technical bulletin No. 65 entitled, "Evaluating Compliance with FCC Guidelines for Human Exposure to Radio Frequency Electromagnetic Fields" (Edition 97-01, August 1997), provides assistance to determine whether FCC-regulated transmitting facilities, operations or devices comply with guidelines for human exposure to radio frequency electromagnetic fields as adopted by the Commission in 1996. OET Bulletin No. 65 contains the technical information necessary to evaluate compliance with the FCC's policies and guidelines.

The Maximum Permitted Exposure (MPE) level for broadcast facilities that operate on a frequency between 30 MHZ and 300 MHZ is 200 microwatts per centimeter squared

STATEMENT OF JOHN E. HIDLE, P.E.

KPTH - Sioux City, Iowa

PAGE 5

($\mu\text{W}/\text{cm}^2$) for an "uncontrolled" environment, and is 1000 microwatts per centimeter squared ($\mu\text{W}/\text{cm}^2$) for a "controlled" environment. The MPE level for broadcast facilities that operate on a frequency between 300 MHZ and 1500 MHZ, primarily UHF TV stations, is determined, in $\mu\text{W}/\text{cm}^2$, for an "uncontrolled" environment by dividing the operating frequency in MHZ by 1.5, and is similarly determined for a "controlled" environment by dividing the operating frequency in MHZ by 0.3.

The predicted emissions of KPTH must be considered, in addition to predicted emissions from any other proposed or existing stations at the site. For KPTH, which will operate on television Channel 30 (566-572 MHZ), the MPE is 379.33 microwatts per centimeter squared ($\mu\text{W}/\text{cm}^2$) in an "uncontrolled" environment and 1,896.7 $\mu\text{W}/\text{cm}^2$ in a "controlled" environment. The proposed KPTH facility will operate with a maximum ERP of 871 kW from an elliptically polarized directional transmitting antenna with a centerline height of 597.7 meters above ground level (AGL). Considering a predicted vertical plane relative field factor of 0.300 the KPTH facility is predicted to produce a power density at two meters above ground level of 14.845 $\mu\text{W}/\text{cm}^2$, which is 3.91% of the FCC guideline value for an "uncontrolled" environment, and 0.78% of the FCC's guideline value for "controlled" environments. There are two other full-power DTV stations and two Lo-VHF LPTV stations that are located at the KPTH site. Therefore, the total estimated percentage of the ANSI value at the proposed site, including the cumulative radiation from all authorizations within the relevant proximity, is 9.63% of the limit applicable to "uncontrolled" environments, and 1.93% of the limit for "controlled" environments. (See Appendix A)

OCCUPATIONAL SAFETY

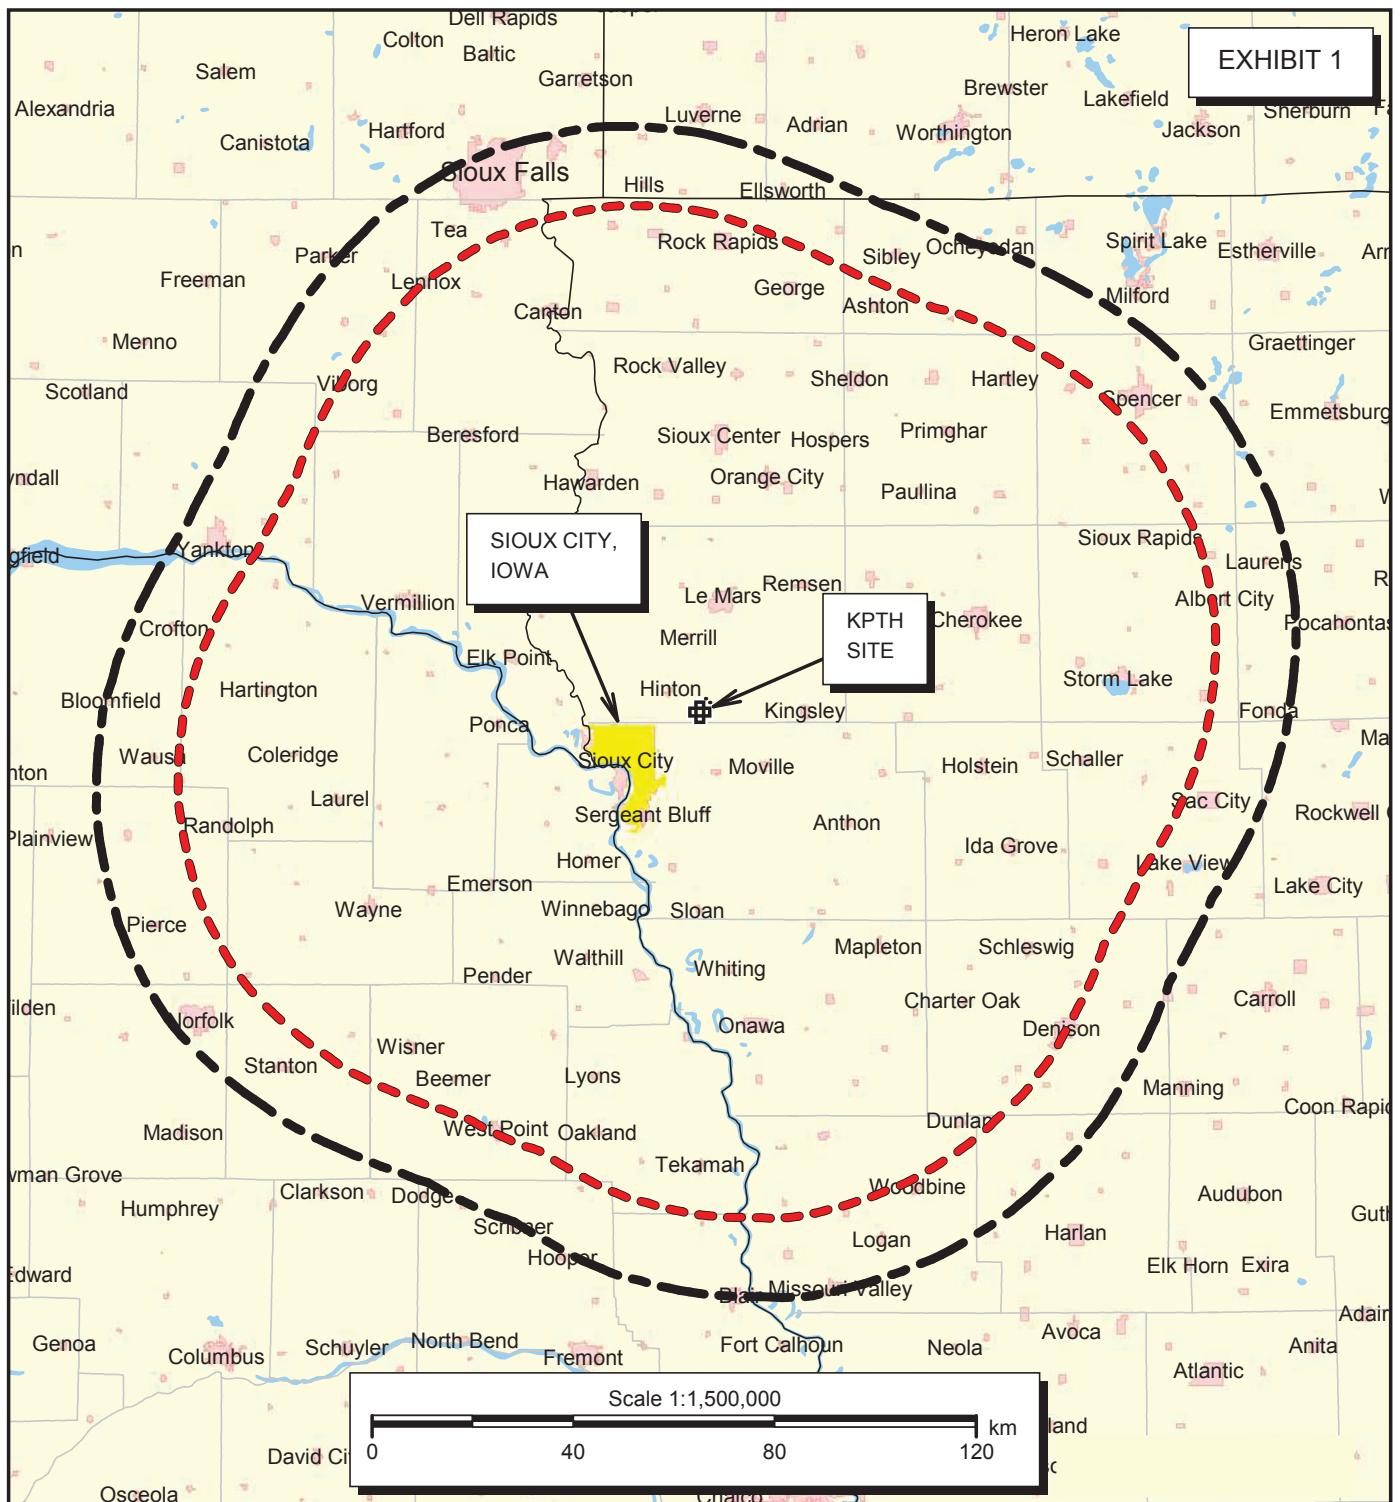

The licensee of KPTH is committed to the protection of station personnel and/or tower contractors working in the vicinity of the KPTH antenna, and is committed to reducing power or ceasing operation during times of maintenance of the transmission systems, when necessary, to ensure protection to personnel.

SUMMARY

It is submitted that the instant application for minor modification of its post-reassignment channel 30 construction permit, No. 0000033734, to decrease KPTH's ERP to 871 kW, as described herein, complies with the Rules, Regulations and relevant Policies of the Federal Communications Commission. This statement, FCC Form 2100, its technical sections, and the attached exhibits were prepared by me or under my direct supervision and are believed to be true and correct to the best of my knowledge and belief.

K06QG-D	DT	6	85	H	550	0.300	0.300	0.003	200.00	0.00%
TOTAL PERCENTAGE OF FCC GUIDELINE VALUE =										9.63%

* For television stations a very conservative vertical relative field factor of 0.3 was assumed pursuant to OET Bulletin 65.

KPTH - SIOUX CITY, IOWA

Longley-Rice Interference Analysis

November 2018

tvstudy v2.2.5 (4uoc83)
Database: localhost, Study: KPTH 30 1004C 871KW, Model: Longley-Rice
Start: 2018.11.20 14:21:27

Study created: 2018.11.20 14:21:27

Study build station data: LMS TV 2018-11-19 #238

Proposal: KPTH D30 DT CP SIOUX CITY, IA
File number: KPTH 30 1004C 871KW
Facility ID: 77451
Station data: User record
Record ID: 858
Country: U.S.
Zone: II

Build options:

Protect pre-transition records not on baseline channel

Search options:

Non-U.S. records included

Baseline record excluded if station has CP

Stations potentially affected by proposal:

IX	Call	Chan	Svc	Status	City, State	File Number	Distance
Yes	KXVO	D29	DT	CP	OMAHA, NE	BLANK0000034544	168.5 km
Yes	KSTC-TV	D30	DT	CP	MINNEAPOLIS, MN	BLANK0000034690	369.8
No	KPXE-TV	D30	DT	LIC	KANSAS CITY, MO	BLANK0000001701	421.4
Yes	KMTV-TV	D31	DT	CP	OMAHA, NE	BLANK0000026767	143.2

No non-directional AM stations found within 0.8 km

No directional AM stations found within 3.2 km

Record parameters as studied:

Channel: D30
Latitude: 42 35 12.00 N (NAD83)
Longitude: 96 13 19.00 W
Height AMSL: 1004.0 m
HAAT: 613.0 m
Peak ERP: 871 kW
Antenna: Dielectric-TFU-20ETT/VP-R P210 (ID 1002737) 0.0 deg
Elev Patrnr: Generic
Elec Tilt: 0.75

40.3 dBu contour:

Azimuth	ERP	HAAT	Distance
0.0 deg	427 kW	618.2 m	114.9 km
45.0	464	589.0	114.2
90.0	586	599.0	116.9
135.0	351	621.3	113.2
180.0	427	627.8	115.3
225.0	464	612.0	115.4
270.0	586	626.7	118.3
315.0	351	611.3	112.8

ERP exceeds maximum

**Appendix B - Interference Analysis
KPTH - Sioux City, Iowa
Channel 30 - 871 kW - Page 2**

ERP: 871 kW ERP maximum: 313 kW

Distance to Canadian border: 685.6 km

Distance to Mexican border: 1497.1 km

Conditions at FCC monitoring station: Grand Island NE
Bearing: 225.4 degrees Distance: 260.2 km

Proposal is not within the West Virginia quiet zone area

Conditions at Table Mountain receiving zone:
Bearing: 253.2 degrees Distance: 797.7 km

Study cell size: 2.00 km

Profile point spacing: 1.00 km

Maximum new IX to full-service and Class A: 0.50%

Maximum new IX to LPTV: 2.00%
