

**STATEMENT OF JOHN E. HIDLE, P.E.
IN SUPPORT OF AN APPLICATION FOR AN INTERIM
AUXILIARY POST REPACK CONSTRUCTION PERMIT
WTVD - DURHAM, NORTH CAROLINA
DTV - CH. 9 - 45 kW - 473.6 m HAAT**

Prepared for: WTVD TELEVISION, LLC

I am a Consulting Engineer, an employee in the firm of Carl T. Jones Corporation, with offices located in Springfield, Virginia. My education and experience are a matter of record with the Federal Communications Commission. I am a Licensed Professional Engineer in the Commonwealth of Virginia, No. 7418, and in New York State, No. 63418.

GENERAL

This office has been authorized by WTVD TELEVISION, LLC, licensee of WTVD, channel 11, facility ID number 8617, licensed to Durham, North Carolina, to prepare this statement, FCC Form 2100, Schedule A, its technical sections, and the associated exhibits in support of an application for a post repack auxiliary construction permit. The applicant proposes to replace its existing auxiliary channel 11 antenna with a new antenna of the same make and model for its post repack channel 9. Once the post repack channel 9 interim auxiliary facility is completed and ready for operation the applicant proposes to transition directly to the interim auxiliary facility on channel 9. Upon that transition WTVD will remove its main channel 11 antenna and replace it with its authorized channel 9 main antenna. When the new main channel 9 facility is licensed the applicant will license the "interim" channel 9 facility as the station's post-transition auxiliary.

**STATEMENT OF JOHN E. HIDLE, P.E.
WTVD - Durham, North Carolina
PAGE 2**

DIRECTIONAL ANTENNA

The applicant proposes to install a new Dielectric model TLS-V8/VP-R S180 elliptically polarized directional transmitting antenna with its center of radiation located at a height above ground of 457.5 meters, and a height above average terrain of 473.6 meters. The antenna manufacturer's horizontal plane azimuth radiation pattern for the horizontally polarized component is shown and tabulated in exhibit 2. The manufacturer's horizontal plane azimuth pattern for the vertically polarized component is shown and tabulated in exhibit 3. The manufacturer's vertical plane elevation radiation pattern, illustrating the antenna's radiation characteristics above and below the horizontal plane is shown and tabulated in Exhibit 4.

The existing channel 11 auxiliary antenna will be removed from the tower structure and the new interim/auxiliary channel 9 antenna will be installed in its place with the same radiation center at 457.5 meters Above Ground Level (AGL). The overall structure height will remain at 705 meters Above Mean Sea Level (AMSL). (See ASR #1010348)

PREDICTED COVERAGE CONTOURS

The predicted coverage contours were calculated in accordance with the method described in Section 73.625(b) of the Rules, utilizing the appropriate F(50,90) propagation curves (47 CFR Section 73.699, Figure 9), proposed Effective Radiated Power, and antenna height above average terrain as determined for each profile radial. The average terrain on the eight cardinal radials from 3 kilometers to 16 kilometers from the site, was determined using the NED Three Second US Terrain Database as permitted in the FCC

**STATEMENT OF JOHN E. HIDLE, P.E.
WTVD - Durham, North Carolina
PAGE 3**

Rules. The antenna site elevation and coordinates were determined from FCC antenna registration data. Exhibit 1 shows the predicted Noise Limited (36 dBu) contour, and the principal community (43 dBu) contour. The 43 dBu contour completely encompasses the principal community of license, Durham, North Carolina.

ALLOCATION CONSIDERATIONS

Post-Transition DTV Considerations

A study was performed, using the FCC's software, tv_study, v. 2.2.5, to determine if the instant application for construction permit is predicted to cause new prohibited interference to post reassignment DTV stations, construction permits, DTV allotments or Class A DTV stations. The study results, shown in Appendix B, indicate that the instant application for construction permit is predicted to cause no new interference exceeding 0.5% to the populations served by any post reassignment DTV station, construction permit, allotment or Class A DTV stations. (See Appendix B)

International DTV Considerations

The WTVD site is located within neither the Canadian nor the Mexican international coordination zone, therefore there are no international DTV considerations required.

BLANKETING AND INTERMODULATION INTERFERENCE

Other broadcast and non-broadcast facilities are either co-located with, or located within 10 km of the proposed WTVD site. The applicant does recognize its responsibility to remedy complaints of interference that might result from this proposal in accordance with applicable Rules.

**STATEMENT OF JOHN E. HIDLE, P.E.
WTVD - Durham, North Carolina
PAGE 4**

RADIO FREQUENCY IMPACT

The FCC's guidelines and procedures for evaluating environmental effects of radio frequency (RF) emissions are generally based on recommendations by the National Council on Radiation Protection and Measurements (NCRP) in NCRP Report No. 86 (1986) and by the American National Standards Institute and the Institute of Electrical and Electronic Engineers, LLC (IEEE) in ANSI/IEEE C95.1-1992 (IEEE C95.1-1991). The guidelines define a maximum permissible exposure (MPE) level for occupational or "controlled" situations, and for "uncontrolled" environments that apply in all other cases that might affect the general public. The FCC Office of Engineering and Technology's technical bulletin No. 65 entitled, "Evaluating Compliance with FCC Guidelines for Human Exposure to Radio Frequency Electromagnetic Fields" (Edition 97-01, August 1997), provides assistance to determine whether FCC-regulated transmitting facilities, operations or devices comply with guidelines for human exposure to radio frequency electromagnetic fields as adopted by the Commission in 1996. OET Bulletin No. 65 contains the technical information necessary to evaluate compliance with the FCC's policies and guidelines.

The Maximum Permitted Exposure (MPE) level for broadcast facilities that operate on a frequency between 30 MHZ and 300 MHZ is 200 microwatts per centimeter squared ($\mu\text{W}/\text{cm}^2$) for an "uncontrolled" environment, and is 1000 microwatts per centimeter squared ($\mu\text{W}/\text{cm}^2$) for a "controlled" environment. The MPE level for broadcast facilities that operate on a frequency between 300 MHZ and 1500 MHZ is determined, in $\mu\text{W}/\text{cm}^2$, for an "uncontrolled" environment by dividing the operating frequency in MHz by 1.5, and is determined for a "controlled" environment by dividing the frequency in MHZ by 0.3.

**STATEMENT OF JOHN E. HIDLE, P.E.
WTVD - Durham, North Carolina
PAGE 5**

The predicted emissions of WTVD must be considered, in addition to predicted emissions from any other proposed or existing stations at the site. For WTVD, which will operate on television Channel 9 (186-192 MHZ), the MPE is 200.0 microwatts per centimeter squared ($\mu\text{W}/\text{cm}^2$) in an "uncontrolled" environment and 1,000.0 $\mu\text{W}/\text{cm}^2$ in a "controlled" environment. The proposed WTVD facility will operate with a maximum ERP of 45 kW from an elliptically polarized directional transmitting antenna with a centerline height of 457.5 meters above ground level (AGL). Considering a predicted vertical plane relative field factor of 0.300 the WTVD facility is predicted to produce a power density at two meters above ground level of 1.316 $\mu\text{W}/\text{cm}^2$, which is 0.66% of the FCC guideline value for an "uncontrolled" environment, and 0.1316% of the FCC's guideline value for "controlled" environments. The WTVD channel 11 facility remains at the site until the transition to channel 9 is completed, therefore, the total percentage of the ANSI value at the proposed site, including the cumulative radiation from both WTVD authorizations is 1.04% of the limit applicable to "uncontrolled" environments, and 0.208% of the limit for "controlled" environments. (See Appendix A)

OCCUPATIONAL SAFETY

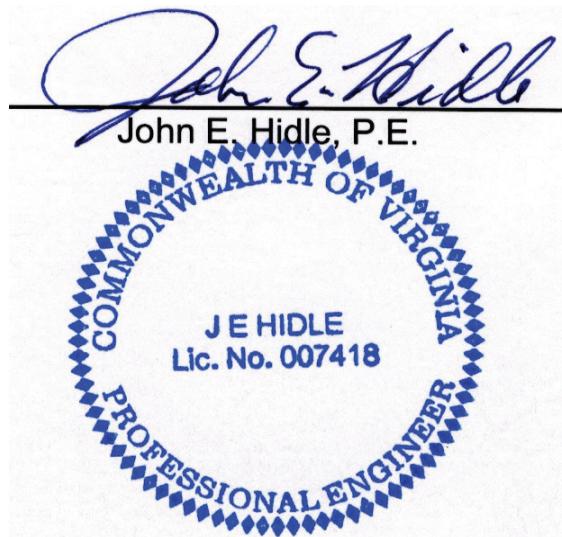

The licensee of WTVD is committed to the protection of station personnel and/or tower contractors working in the vicinity of the WTVD antenna, and is committed to reducing power or ceasing operation during times of maintenance of the transmission systems, when necessary, to ensure protection to personnel.

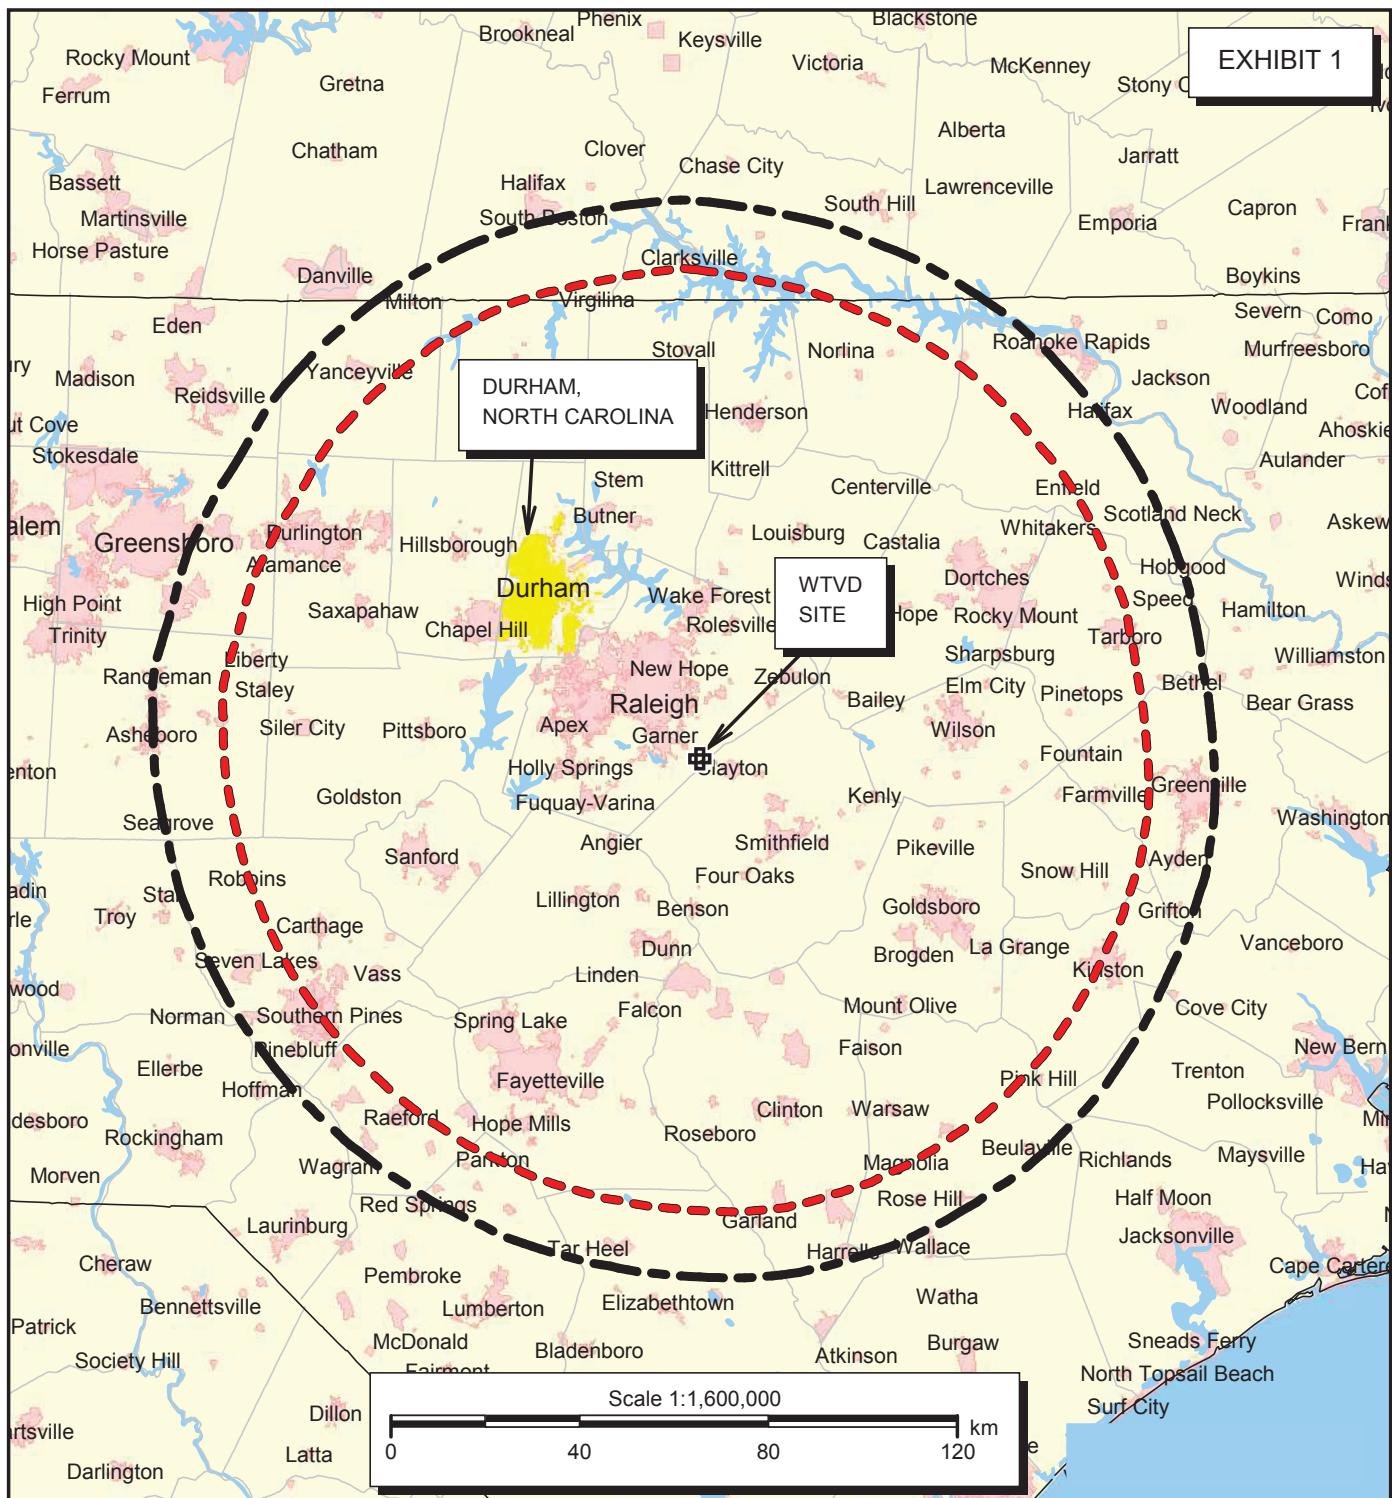

**STATEMENT OF JOHN E. HIDLE, P.E.
WTVD - Durham, North Carolina
PAGE 6**

SUMMARY

It is submitted that the instant application for construction permit for an interim antenna facility to implement the change of WTVD from channel 11 to channel 9, as described herein, complies with the Rules, Regulations and relevant Policies of the Federal Communications Commission. This statement, FCC Form 2100, its technical sections, and the attached exhibits were prepared by me or under my direct supervision and are believed to be true and correct to the best of my knowledge and belief.
