

**INTERIM ANTENNA EXHIBIT**

Digital Television Station KSAX(TV), Alexandria, Minnesota (the “Station”), does not have a licensed or permitted auxiliary (backup) antenna. However, the Station, pursuant to a recent FCC grant and extension of special temporary authority (“STA”), has constructed and is operating, as circumstances warrant, an interim antenna on its current channel in order to facilitate the Station’s transition and to reduce disruption to its over-the-air audience. *See* FCC File No. 0000060675 (grant of special temporary authority for interim antenna). In March 2019, the FCC also approved an extension of time to enable the Station to continue to operate that interim antenna pursuant to that STA through June 21 (the current end of the main station’s transition phase), which should allow the Station to transition from its current channel on this interim facility back to its post-repacking channel on its newly constructed main facility as of June 21, 2019.

Finally, for avoidance of doubt and for purposes of this report, the Station has responded to queries regarding auxiliary antennas as if those questions included this interim antenna.
