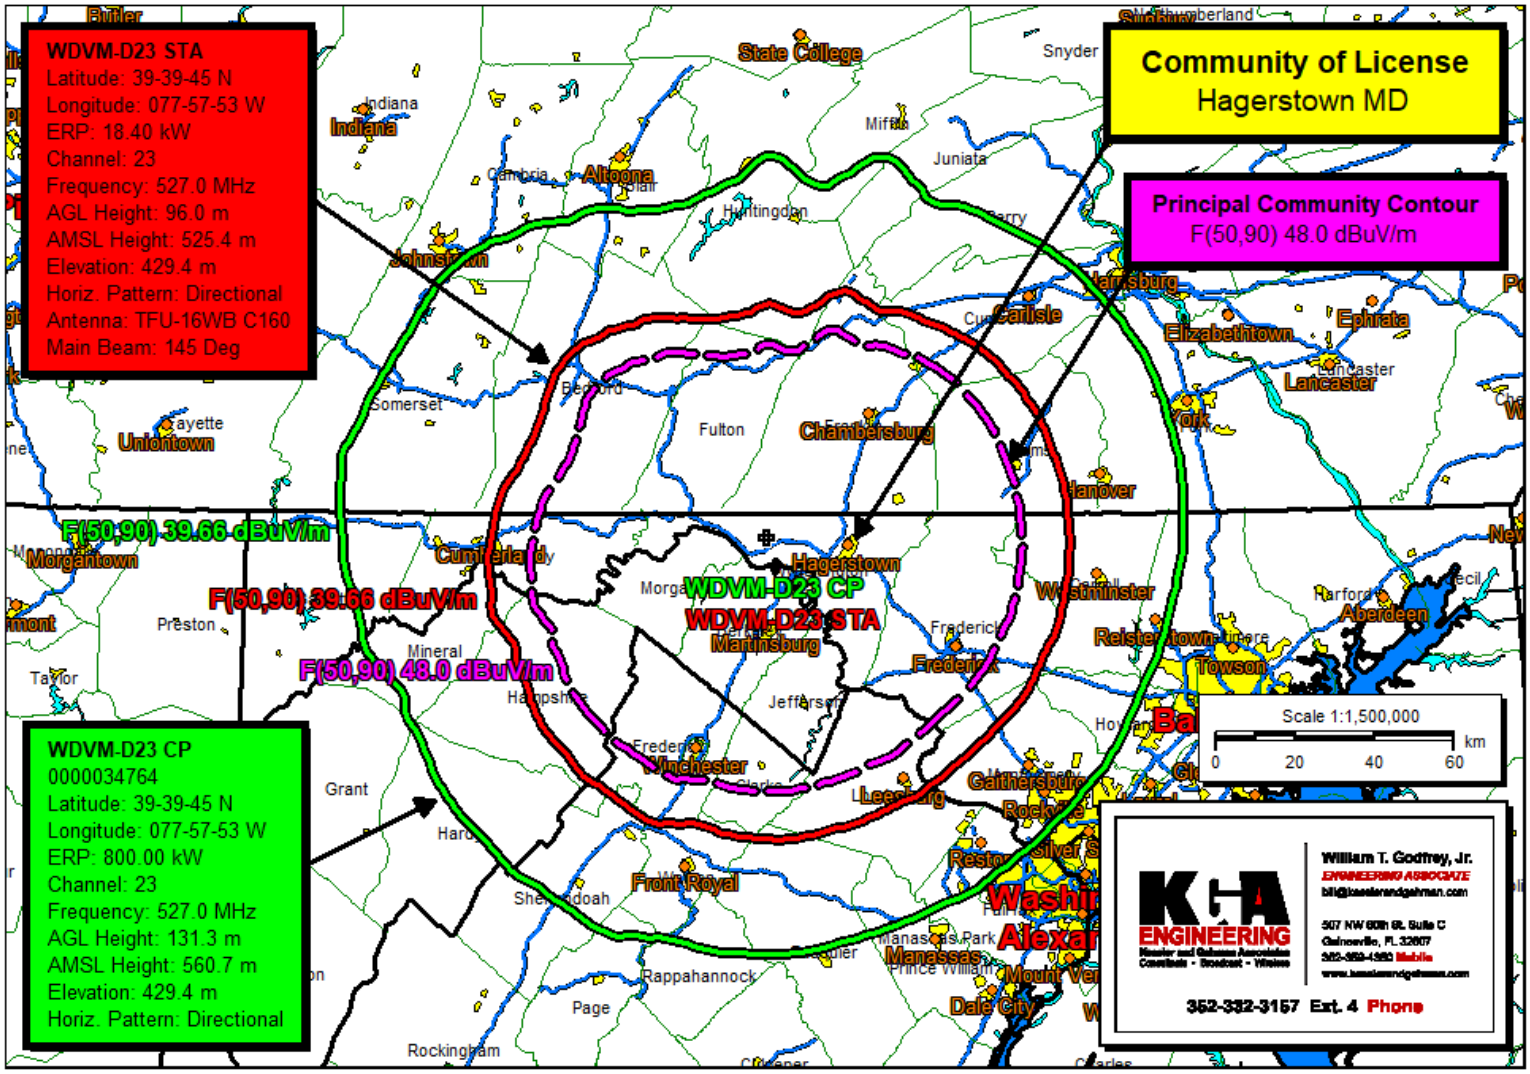
PURPOSE OF POST-AUCTION ENGINEERING STA

The purpose of this Engineering STA application is to allow the WDVM-DT facility to temporarily operate with alternate parameters on its post-auction channel (23) using a side-mounted directional interim antenna (TFU-16WB-R C160) while the new post-auction main facility continues to be built-out. The proposed WDVM temporary facility at reduced parameters will completely encompass its community of license with the F(50,90) 48.0 dBu principal community contour and will not exceed its authorized F(50,90) 39.66 dBu post-auction protected noise limited contour in any azimuthal direction (see showing below). The post-auction interim facility will initially only be able to operate with a TPO of 1.2 kW using a "floater" low-power transmitter since the WDVM post-auction main transmitter will not be installed and operational until after the station's phase deadline due to installer delays.



WDVM-D23 CP vs. WDVM-D23 Interim STA (TFU-16WB C160 at 145 Deg)

CERTIFICATION

This technical statement was prepared by William T. Godfrey, Jr., Engineering Associate with the firm Kessler and Gehman Associates, Inc. having offices in Gainesville, Florida, and has been working with the firm in the field of radio and television broadcast consulting since 1998. Mr. Godfrey was a graduate from the University of North Florida and a Distinguished Military Graduate from the University of Florida. As a Professional in the field of Telecommunications he states under penalty of perjury that the information contained in this report is true and correct to the best of his knowledge and belief.
