

EXHIBIT A

ENGINEERING STATEMENT

The engineering data contained herein have been prepared on behalf of CABLE AD NET NEW YORK, INC., licensee of digital Low Power Television Station WYBN-LD, Channel 14 in Cobleskill, New York, in support of its Displacement Application for Construction Permit to specify operation on Channel 26 from its presently licensed site. This channel change is required due to significant irreparable interference caused to Channel 14 Land Mobile facilities from the licensed operation of WYBN-LD on Channel 14.

It is proposed to mount a directional 8-bay circularly-polarized slotted cylinder antenna at the 39.6-meter level of the existing 54.9-meter communications tower on which the present WYBN-LD antenna is presently mounted. The proposed effective radiated power for the facility is 12.0 kW in the horizontal and vertical planes. Exhibit B is a map upon which the predicted 51 dBu service contour is plotted. Elevation and azimuth patterns for the proposed antenna are provided in Exhibit C.

Exhibit D is a summary report from a TVStudy interference analysis for the proposed facility. Our study employed a cell size of 1.0 kilometer and increment spacing of 0.1 kilometer. Further the applicant proposes use of a full-service mask filter. The results indicate that the proposed WYBN-LD facility meets the Commission's interference requirements to all present and repacked full-power and low-power co-channel and adjacent-channel television facilities. It is important to note that the predicted interference to full-power television station WTEN-DT, Channel 26 in Albany, New York (BLCDT-20060104ACC), will be eliminated once WTEN-DT moves to its post-repack channel, Channel 24. Therefore, a waiver of the FCC's contingent

SMITH AND FISHER

EXHIBIT A

application Rule is hereby requested in this regard, if necessary. WYBN-DT will not construct and operate on Channel 26 until such time as WTEN-DT has ceased operation on Channel 26.

A detailed power density calculation is provided in Exhibit E.

Since no change in the overall height or location of the existing tower is proposed herein, the Federal Aviation Administration has not been notified of this application. In addition, due to the diminutive height of the tower and its proximity to the nearest airport runway, FCC tower registration is not required for this structure.

I declare under penalty of perjury that the foregoing statements and the attached exhibits, which were prepared by me or under my immediate supervision, are true and correct to the best of my knowledge and belief.

KEVIN T. FISHER

EXHIBIT E

POWER DENSITY CALCULATION

**PROPOSED WYBN-LD
CHANNEL 26 – COBLESKILL, NEW YORK**

Since the FCC considers the possible biological effects of RF transmissions in its environmental determinations, we have studied the matter with respect to this Cobleskill facility. Employing the methods set forth in *OET Bulletin No. 65* and considering a main-lobe effective radiated power of 12.0 kW (H, V), an antenna radiation center 39.6 meters above ground, and the specific elevation pattern for the proposed ERI AL8-26-PL antenna, maximum power density two meters above ground of 0.0058 mW/cm² is calculated to occur 20 meters northeast of the base of the tower. Since this is only 1.6 percent of the 0.36 mW/cm² reference for uncontrolled environments (areas with public access) surrounding a facility operating on Channel 26 (542-548 MHz), a grant of this proposal may be considered a minor environmental action with respect to public exposure to non-ionizing electromagnetic radiation.

Further, the station owner will take whatever precautionary steps are necessary, such as reducing power or leaving the air temporarily, to ensure that workers operating in the vicinity of the antenna are not exposed to excessive non-ionizing radiation.
