WDKK-LP was silent from 2/25/2019 to 9/26/2019 Repairs and
Replacements due to storm damage.

WDKK-LP went silent on 2/25/2019 as a result of the transmitter being blown-out during a storm that hit the area of its facilities. The damage also affected the station's transmission line. An STA was sought from the Commission by the Licensee to make repairs. After initial repairs, it was discovered that reflected power was still being sent back to transmitter and had to be reconciled. To resolve this problem, a boom was required. A boom lift was secured to replace the coax cable and then the STL link stopped working. So the STL link also had to be replaced. After a complete revamp of equipment (including transmitter, transmission line and STL link) at the transmitter site, the station went back on the air 9/26/2019.
