

**STA Request
KSTR-DT
Facility ID 60534**

UniMás Dallas LLC, licensee of KSTR-DT, Irving, Texas, Facility ID 60534 (the “Station”) respectfully requests Special Temporary Authority (“STA”) to continue post-transition operations using its main facility while the concurrently filed modification of construction permit (“CP”) is being processed. As noted the request for construction permit extension and waiver of tolling rule, the Station became aware while preparing its License to Cover application in advance of its current December 18, 2019, buildout deadline that updated antenna pattern data inadvertently was not entered into the LMS form of the October 24, 2018 modification application (LMS File no. 0000063075) that resulted in its current CP. The correct antenna pattern data was included in the modification as an uploaded attachment, but the pattern data from the previous antenna and CP was accidentally retained in the LMS record and now pre-loads into the license to cover application electronic form. In order to allow the Station time to file a corrective modification of its CP, the Station respectfully requests at six-month STA to operate on its amended main facility using the updated antenna pattern parameters. Once the corrective modification application is granted, the Station will promptly file a License to Cover application for its finalized post-transition facilities.
