

Explanatory Exhibit for License Modification Application for WPLG

This exhibit is to clarify that the certifications made with respect to an “underlying construction permit” are inapplicable to the instant application. This application is being filed as a result of a change to the station’s transmission line, pursuant to FCC Rule Section 73.1690(c)(10). As a result, there is no underlying construction permit. In addition, while the station’s main studio complies with the former main studio rule and the licensee is, consequently, able to certify in the affirmative to the compliance of the main studio’s location, the licensee also recognizes that this certification is no longer applicable.
