

W39BH, Champaign, IL

Facility ID# 49185

20 April, 2018

Technical Exhibit

W39BH on channel 39 is automatically displaced as of some future date by virtue of its channel position above 36. Additionally, W39BH currently holds a construction permit for a digital companion channel 24 (BDCCDTL-20150108ABN). That construction permit remains valid, however a construction permit (0000034285) recently issued to WHOI-TV in Peoria for its maximized post-repack facility will lead to a prohibited amount of interference to both WHOI and the W39BH companion channel on 24 when WHOI begins testing its post-repack facilities on 10/19/2019. See attached TV Study report.

Therefore, Ventana Television Inc. seeks dismissal of the existing digital companion channel on channel 24 and submits the accompanying application to move to channel 27. The second TV Study report attached demonstrates no interference issue either from or to the proposal.

With the channel 24 companion channel being dismissed this application also serves as the digital conversion application for W39BH.

No tower modifications are involved in the proposed construction and the replacement antenna will be very similar in size to the existing one, so any effects to directional AM station WILL would be negligible.
