

ENVIRONMENTAL STATEMENT  
K206EO GRANITE, WYOMING  
CEDAR COVE BROADCASTING, INC.  
MAY 2020

The applicant proposes mounting a new antenna on an existing 76.2 meter registered tower, ASR # 1009309. The proposed Center of Radiation will be 23 meters Above Ground Level. A 1 bay, vertical only polarized Nicom model BKG-77, non-directional antenna is proposed, with a maximum Effective Radiated Power of 92 watts. Calculations were made using FM Model for Windows, version 2.10. The proposed antenna Center of Radiation, above ground, was reduced by 2 meters to allow for the average height of a human on the ground. FM Model predicts a peak exposure of  $8.39 \mu\text{w}/\text{cm}^2$  at a distance of 5.6 meters from the base of the tower. This represents 4.2 % of the allowable Maximum Permissible Exposure ("MPE") of  $200 \mu\text{w}/\text{cm}^2$  for uncontrolled environments at any point on the ground.

The applicant will ensure that the public access to the tower is restricted by fencing, anti-climb devices or other appropriate measures. The site is posted with RF warning signs. If climbing of the tower by authorized personnel becomes necessary, transmitter power will be reduced to safe operating levels, or transmission even terminated, as necessary as not to exceed the RF exposure limits to tower workers. The licensee will cooperate with other users at the site with the scheduling of such tower or antenna maintenance.

No modification of the existing tower is proposed, other than the proposed side mounting of the antenna system and addition of a transmission line. The tower was constructed prior to March 16, 2001. The National Programmatic Agreement generally

allows such a collocation without consultation or review under Section 106 and Subpart B of 36 CFR §800. The applicant believes that it is in full compliance with the Agreement, and that no further study is required.
