

Difference Between Authorized and Constructed Facility

The antenna authorized to KCWS-LP in Construction Permit LMS-0000054526 is an Alive ATC-BCSH8M-U1 omnidirectional, horizontally-polarized antenna with 1 degree of electrical beam tilt.

The constructed facility utilizes an SWR SWLP8OI omnidirectional, horizontally-polarized antenna with 0.5 degrees of electrical beam tilt.

All other operating parameters authorized in LMS-0000054526 remain unchanged, including effective radiated power, antenna height and transmitter site location.

In addition, it is important to note that no change in the station's coverage footprint results from this antenna substitution.

It is respectfully requested that the Commission make this antenna change when it issues the new license for KCWS-LP on Channel 27.
