

## **STATEMENT AS TO REQUEST FOR STA EXTENSION**

The basis for the instant STA is to permit Entravision Holdings, LLC (“Entravision”) to continue to operate Station KDFT-LD, San Diego, California, in the digital mode with reduced power from its currently licensed facilities.

KDFT-LD holds a license, in LMS No. 0000072854, to operate on Channel 16 (having been displaced from Channel 25).

The Station licensee has been informed by the County of Los Angeles that KDFT-LD’s operations are causing interference to the County’s public safety operations conducted using spectrum allotted for public land mobile service. While Entravision does not believe that it is causing the interference affecting the County’s public land mobile service, owing to the location and operating characteristics of the Station’s facilities, it also does not wish to jeopardize the County’s ability to undertake public safety operations.

Consequently, Entravision has received a construction permit to modify its transmission facilities, in LMS No. 0000096278, and has further modified that permit, in LMS No. 0000106610, such that Entravision believes that, once completed, there will be no interference to the public land mobile service undertaken by the County.

Entravision is not yet in a position to construct and operate the modified licensed facilities. It is seeking this STA in order to allow to reduce, at the present time, output power in order to avoid, if it is the cause, any interference to the County’s land mobile service.

Entravision submits that it is in the public interest to allow it to operate, with facilities a t variance with its license, so that, pending completion of Station modifications, it can accommodate the County’s concerns as to public land mobile service interference.
