W18BL-D FI 68911, Ch 32

Applicant is seeking a waiver of the filing freeze for Class A Stations. The only change is the make and model of the antenna. It is an exact match from SL-8 to PSILP8OI. The antenna orientation remains the same.

This change is necessitated by the fact that the SL-8 is not rated at the input power required to achieve the 15kW ERP for this Class A Station. A Contour map showing both contours exhibit their overlapping features.

It is requested that this minor modification be granted swiftly as the Station is silent and ready to go on the air on its Ch 32 displacement assignment. There are no other stations affected by this change.

The construction of a new tower at this site was in compliance with all local zoning requirements and approved by the FAA and FCC. The old tower structure was dismantled. The tower is adequately fenced and signs posted. There was no environmental hazard or significant environmental effect with the replacement of the tower.

Respectfully submitted,
Susan Hansen
