EXPLANATION FOR SILENT STA

It is the Licensee's intent to file to for 3.0 (next gen) authorizations for each of the above referenced stations. As such, the stations were taken silent as of March 23, 2020 while application preparation and submissions are made, negotiations with equipment manufacturers are completed and deliveries are made, and optimized antennas and transmitters are implemented.

Shortly after the initial Silent STA was filed, the COVID-19 Pandemic struck and the ability to obtain the antennas and transmitters has been severely limited. More recently still, the Oregon wildfires that have burnt much of Southern Oregon now prevent access to these sites due to imposition of "industrial work stops" due to active fires, threat of fires and severely unhealthy air quality.

The K14RW-D transmitter site was burnt out by the recent fires. K28KI-D's transmitter site is too close to the fire area and state and local authorities have prohibited access due to fire threat and bad air quality.
