EXPLANATION FOR SILENT STA

It is the Licensee's intent to file to for 3.0 (next gen) authorizations for each of the above referenced stations. As such, the stations have been taken silent as of March 23, 2020 while application preparation and submissions are made, negotiations with equipment manufacturers are completed and deliveries are made, and optimized antennas and transmitters are implemented.

Shortly after the initial Silent STA was filed, the COVID-19 Pandemic struck and the ability to obtain the antennas and transmitters has been severely limited.

More recently still, the Oregon wildfires that have burnt much of Southern Oregon, Washington and parts of Montana now limit access to some of these stations.

Access to some Licensee transmitter sites is limited or prohibited due to imposition of "industrial work stops" due to active fires, threat of fires and severely unhealthy air quality. K24IQ-D falls into this category. The transmitter site is too close to the fires to be accessed.
