

W290BI, Erie, PA, File No. BPFT-20170718AEA

Special Operating Condition No. 2:

Due to administrative oversight, a license to cover application for the subject construction permit was not submitted prior to commencing program test operations pursuant to Construction Permit File No. BPFT-20170718AEA. Upon recent review of FCC records to locate the license to cover application which was believed to have been filed, it was determined that such application had not been filed previously. Consequently, the licensee is now submitting this license to cover application. In all other respects, the W290BI facility was constructed in compliance with all special operating conditions, terms, and obligations described in Construction Permit File No. BPFT-20170718AEA.
