

## **Technical Statement**

This Technical Statement and attached exhibits were prepared on behalf of Alpha Media Licensee, LLC ("Alpha"), licensee of Station KTPK, Channel 295C, Topeka, KS. As a result of the repack a new tower was constructed immediately adjacent to the original tower for KTPK. This did not change the site coordinates but resulted in a 1 meter increase in the RC-AMSL. This increase also requires correcting the HAAT for KTPK. Alpha herein submits this Form 302 application to make these corrections.

The new tower ASR is now 1315212 which has a site elevation that is one meter higher than the previous tower's site elevation.

Due to this the following also need to be modified:

The adjusted RC-AMSL is 688 meters

The adjusted HAAT is 370 meters
