

**Notification of Temporary Reduced Power Operations**

It has become technically impossible to operate WUNK-TV, Greenville, North Carolina (FAC. ID No. 69149) at the full authorized power of its licensed main facility (see LMS File No. [0000124910](#)). In the early afternoon on Saturday, October 24, 2020, WUNK-TV experienced a high VSWR event involving its main transmitter that resulted in the station being off the air for a brief period. The station was able to resume on air operations at reduced power utilizing its auxiliary transmitter.

The licensee has determined that the facility experienced a failure of one of the transmitter output RF switches. The licensee is currently working with both the transmitter manufacturer, GatesAir, and the switch manufacturer, Dielectric, to remedy this problem. WUNK-TV is currently on air at approximately 8% of its authorized (i.e., authorized under the main facility license granted in File No. [00000124910](#)) effective radiated power (ERP) utilizing its auxiliary transmitter.

The licensee will notify the Commission once full authorized operations have been restored and will seek STA if the reduced power situation will last longer than 30 days.
