The NBC log had Vets Saving Pets and Roots less traveled but the network did not feed the shows, we sat in black for a few moments then a paid program was played at 1pm. No spots were missed.

NBC backup was not playing the paid program (10175) that was logged to run at 2pm. So I tried to cue forward and set the logged 2:2830pm break to TOD in order to get the backup on track with primary. When I tried to cue forward NBC primary cue forward instead which caused the paid program to stop. I immediately pressed the NBC playback button to run some psas. By this time the backup was running paid program (10315) so I just went to that one. But this only played for about 10 minutes. What I had to end up doing in order to get back on track and hit NBC on time was combine both the logged 2:28:30pm and 2:58:30pm into one break then throw in a paid program (10175) for about 10 minutes then dip out and hit NBC on time at 3:00:04pm. Because of this issue neither paid program 10175 or 10315 aired on its entirety. There were no spots lost

Did not realize that the NBC Promo Swap logged at 4:44:26pm was not in until I saw that we went back to NBC early and saw the peacock. I then hit the NBC playback button to run the next cued spot.

I was learning how to use ingest 2 and I missed the 15 second station break of Vintage SNL
