

**Statement re KJNO(AM) Base Impedance  
For K227DP Juneau License Application  
March 2021**

As a requirement for licensing the newly-constructed K227DP facility, a base impedance measurement was made on the KJNO(AM) tower on which the FM translator antenna has been installed.

The post-installation base impedance was found to be 44 ohms, which is the same as reported on the most recent KJNO license. Therefore there is no need to file an application for direct measurement for the AM station.
