

## AM STATION PROTECTION

The University of Akron  
Akron, OH

Although the WZIP antenna is mounted on a tower located within ten wavelengths (and three kilometers) of the transmitter site of WHLO(am) - Akron, Ohio, which operates on 640 khz using a directional antenna, its replacement isn't considered to be a significant modification pursuant to section 1.30002 of the FCC rules since it is mounted on an existing grounded tower which hasn't previously been detuned. As a result, the notification and evaluation requirements of this rule section aren't applicable.
