

ENGINEERING EXHIBIT

Digital Television Station Application for Minor Modification of Licensed Facility

prepared for

Hearst Properties Inc.
WMUR-TV Manchester, NH
Facility ID 73292
Ch. 9 51 kW 312 m

Hearst Properties Inc. ("Hearst") is the licensee of digital television station WMUR-TV, Channel 9, Facility ID 73292, Manchester, NH. WMUR-TV is licensed (file# 0000143119) to operate with 7.35 kW effective radiated power ("ERP") nondirectional at 314 meters antenna height above average terrain ("HAAT"). *Hearst* proposes herein to increase the ERP to 51 kW and to utilize a directional antenna.

The proposed WMUR-TV facility will employ a new antenna system to be top-mounted on the WMUR-TV tower in lieu of the existing main antenna. The WMUR-TV tower structure corresponds to FCC Antenna Structure Registration number 1033995. No increase of overall structure height will result from this proposal.

The proposed antenna is an elliptically polarized directional Dielectric model THV-6A9/VP-R (25 percent vertical polarization). *Hearst* proposes to operate WMUR-TV with an ERP of 51 kW at 312 meters antenna HAAT. The maximum horizontally polarized ERP is 51 kW and the maximum vertically polarized ERP is 12.75 kW. The vertically polarized component will not exceed the horizontally polarized component at any azimuth. The directional antenna's azimuthal patterns are depicted in Figures 1 and 1A for horizontal and vertical polarization, respectively. The antenna's elevation pattern is depicted in Figure 2.

Figure 3 supplies a map that demonstrates compliance with §73.625(a)(1) regarding coverage of the entire principal community. The proposed facility's predicted population exceeds 95 percent of the Incentive Auction¹ baseline facility population.

Interference study per FCC OET Bulletin 69² shows that the proposal complies with the 0.5 percent limit of new interference caused to pertinent nearby full service and Class A television stations except with respect to WMTW (Ch. 8, Facility ID 73288, Poland Spring ME). WMTW would receive 2.64 percent additional interference from the proposed WMUR-TV. Hearst is also the licensee of WMTW and has provided an interference acceptance consent statement, attached separately. FCC processing of this proposal is requested using a **2 km cell size and 0.2 km terrain profile increment**. The interference study output report is provided as Table 1.

The proposed 51 kW ERP exceeds the maximum permitted by §73.622(f)(7) for the proposed antenna HAAT of 312 meters. Section 73.622(f)(5) permits the maximum ERP to be exceeded in order to provide the same geographic coverage area as the largest station within the same market. As demonstrated in Figure 4, the total area within the proposed WMUR-TV NLSC is 32,519 square kilometers, which does not exceed the NLSC area of WGBH-TV (47,588 sq. km, Ch. 5, Boston MA, file# 0000138509). WMUR-TV and WGBH-TV are both in the Boston (Manchester) Nielsen DMA. Although WMUR-TV is located in Zone I, ERP in excess of 30 kW has already been authorized for other Zone I VHF Channel 7-13 stations³ on the basis of the same “largest station in the market” exception in §73.622(f)(5). Thus, the 51 kW ERP specified herein is in compliance with §73.622(f)(5).

¹Incentive Auction Closing and Channel Reassignment Public Notice, DA 17-317, released April 13, 2017.

²FCC Office of Engineering and Technology Bulletin number 69, *Longley-Rice Methodology for Evaluating TV Coverage and Interference*, February 6, 2004 (“OET-69”). This analysis employed the FCC’s current “TVStudy” software with the default application processing template settings, 2 km cell size, and 0.2 km terrain increment. Comparisons of various results of this computer program (run on a Mac processor) to the FCCs implementation of TVStudy show excellent correlation.

³For example, Zone I stations authorized for more than 30 kW ERP include WPXS (160 kW ERP, Ch. 13, Lic file# 0000116945, Mount Vernon IL), WVFX (110 kW ERP, Ch. 13, CP file# 0000034189, Clarksburg WV), WTPC-TV (85 kW ERP, Ch. 7, Lic file# 0000021983, Virginia Beach VA), and WBPH-TV (80.6 kW, Lic file# 0000064341, Bethlehem PA). These Zone I stations relied on the “largest station in the market” exception §73.622(f)(5) to achieve their ERPs.

Human Exposure to Radiofrequency Electromagnetic Field (Environmental)

The proposed operation was evaluated for human exposure to RF energy using the procedures outlined in the FCC's OET Bulletin Number 65. Based on OET-65 equation (10), and considering the antenna relative field in downward elevations (Figure 2), the graph in Figure 5 depicts calculated power density levels attributable to the proposed facility at locations near the site at a height of two meters above ground level. The maximum calculated RF electromagnetic field attributable to the proposed facility is 15.6 percent of the general population / uncontrolled MPE limit at any location two meters above ground level, and occurs within 40 meters of the base of the tower.

One Low Power Television and several FM radio station facilities are authorized at nearby site locations. The following table supplies a summary of RF signal density calculations for the proposed WMUR-TV and the other broadcast facilities near this site, for maximum exposure at 2 meters above ground near each emitter's site. Pursuant to §1.1307(b)(1), Part 74 operations at less than 100 Watts ERP are excluded from this evaluation.

Summary of Radiofrequency Electromagnetic Field Calculations For Area in Vicinity of WMUR-TV Tower

Facility	Channel	ERP (kW)	Polarization	Relative Field	Height (meters)	S - Calculated ($\mu\text{W}/\text{cm}^2$)	S - Limit ($\mu\text{W}/\text{cm}^2$)	Percent of Limit

Total Calculated Signal Density:								41.9%

ERP: Effective Radiated Power
 Polarization: H – Horizontal; V – Vertical; E – Elliptical; C – Circular
 Field: Elevation Pattern Relative Field Value
 Height: Height of radiation center above ground level
 S-Calc: OET Bulletin 65 calculated value of signal density at two meters above ground level
 S-Limit §1.1310 uncontrolled/general population limit for signal density

The manufacturer's elevation pattern for each TV antenna was employed with computations per OET-65 equation (10). For FM stations the FCC's "FMModel" computer analysis⁴ was utilized, in some cases utilizing the worst-case setting for antenna type and number of elements. Individual station contributions were determined as a percentage of their respective exposure limit based on operating frequency and then all individual percentages were summed to determine the total RF exposure level. For simplicity in summing the individual RF contributions, these computations assume all stations are located at a single tower location.

Based on this analysis and considering all broadcast facilities, the summary table shows that the total maximum calculated RF density at two meters above ground level is 41.9 percent of the FCC's uncontrolled / general population MPE limit. Further analysis that considers the actual lateral separation between the various stations would show a lower total maximum RF density.

The general public will not be exposed to RF levels attributable to the proposal in excess of the FCC's guidelines. RF exposure warning signs will continue to be posted. With respect to worker safety, the applicant will coordinate exposure procedures with all pertinent stations and will reduce power or cease operation as necessary to protect persons having access to the site, tower, or antenna from RF electromagnetic field exposure in excess of FCC guidelines. This exhibit is limited to the evaluation of exposure to RF electromagnetic field.

Channel and Facility Information	Section	Question	Response
Proposed Community of License	Facility ID	73292	
	State	New Hampshire	
	City	MANCHESTER	
	DTV Channel	9	
	Designated Market Area	Boston (Manchester)	
Facility Type	Facility Type	Commercial	
	Station Type	Main	
Zone	Zone	1	

Antenna Location Data	Section	Question	Response
Antenna Structure Registration	Do you have an FCC Antenna Structure Registration (ASR) Number?	Yes	
	ASR Number	1033995	
Coordinates (NAD83)	Latitude	42° 59' 01.3" N+	
	Longitude	071° 35' 23.2" W-	
	Structure Type	TOWER-A free standing or guyed struct	
	Overall Structure Height	63.7 meters	
	Support Structure Height	44.8 meters	
	Ground Elevation (AMSL)	396.2 meters	
Antenna Data	Height of Radiation Center Above Ground Level	57 meters	
	Height of Radiation Center Above Average Terrain	312.4 meters	
	Height of Radiation Center Above Mean Sea Level	453.2 meters	
	Effective Radiated Power	51 kW	

Antenna Technical Data	Section	Question	Response
	Antenna Type	Antenna Type	Directional Custom
		Do you have an Antenna ID?	No
		Antenna ID	
	Antenna Manufacturer and Model	Manufacturer:	Dielectric
		Model	THV-6A9/VP-R
		Rotation	0 degrees
		Electrical Beam Tilt	1
		Mechanical Beam Tilt	Not Applicable
		toward azimuth	
		Polarization	Elliptical
	DTV and DTS: Elevation Pattern	Does the proposed antenna propose elevation radiation patterns that vary with azimuth for reasons other than the use of mechanical beam tilt?	No
		Uploaded file for elevation antenna (or radiation) pattern data
