

## Complaint Resolution Plan for W265AV

On April 26, 2021 IBN filed an application to move W265AV to create more distance between the two signals in question. We believe, and our engineering indicates, that this move should bring a resolution to the complaints.

The application to modify has been approved and we are now negotiating and obtaining quotes for the new antenna, new tower site, local permits, tower crew for install, and engineering.
