Ch 27

**Applicant seeks to operate the station at reduced power as a temporary measure.**  
**Existing site, no new construction.**  
**Digital station, stringent mask filter.**

Station is part of the TV Spectrum Repack and Reimbursement Program.

Edge Spectrum, Inc. (Edge) holds a large number of construction permits and licenses across the United States. Many have been involved in the 2018 Displacement Window “Repack” process. Edge plans to utilize DTS and ATSC 3.0 in all of its outstanding construction permits. Edge has sought guidance from the Media Bureau on how to proceed with the build out of this plan without requiring the temporary build of an ATSC 1.0 station. The Commission has previously stated, it seeks to avoid forcing LPTV stations from making significant expenditures in new ATSC 1.0 facilities by July 13, 2021 only to later be faced with a further expenditure of resources if the station chooses to convert those facilities to ATSC 3.0.<sup>1</sup>

Edge plans to modify its construction permits to build a single ATSC 3.0 transmitter and file for a license before expiration of the construction permit.

Edge is fully committed to this plan and has begun ordering equipment to fully execute a transition to ATSC 3.0 broadcasting. Due to the current demand for equipment and tower crews, unforeseen delays are likely to occur which will be out of the control of Edge.
