

REQUEST FOR WAIVER OF SECTION 73.1560(c)

Entravision Holdings, LLC ("Entravision"), the licensee of Station KPMR, hereby requests that the Commission, at this time, waive the requirements of Section 73.1560(c) in connection with the instant engineering STA request.

By the instant request, Entravision is seeking to operate the Station with a low-power transmission service. This request has been necessitated by the loss of the Station's antenna supporting structure, which has sustained an unexpected collapse. In the absence of the facilities on the structure, the Station is unable to operate with its licensed operating parameters.

Section 73.1560(c) instructs us that a television station must operate with not less than 80% of its authorized power. However, KPMR cannot meet that standard in the absence of its previously authorized facilities.

A waiver is warranted here because Entravision seeks to continue to serve the public interest to the best of its abilities, as it plans for the restoration of service under the Station's licensed operating parameters. This can only be accomplished through the use of the low-power facilities now being proposed.

Considering the public interest, Entravision urges the Commission to grant the requested waiver.
