

Notification of Temporary Reduced Power Operations

It has become technically impossible to operate WUNP-TV, Roanoke Rapids, North Carolina (FAC. ID No. 69397) at the full authorized power of its licensed main facility (see LMS File No. [0000121047](#)). On Friday, June 25, 2021, WUNP-TV experienced issues involving its main transmitter that resulted in the station no longer being able to operate with this transmitter. At that time the station began utilizing its auxiliary transmitter. The auxiliary transmitter has a lower output power rating than the main transmitter resulting in the station's reduced power operations.

The licensee is currently working with the transmitter manufacturer, GatesAir, to determine a remedy to this problem. WUNP-TV is currently on air at approximately 36% of its authorized (i.e., authorized under the main facility license granted in File No. [00000121047](#)) effective radiated power (ERP) utilizing its auxiliary transmitter.

The licensee will notify the Commission once full authorized operations have been restored and will seek STA if the reduced power situation will last longer than 30 days.
