RE: NRG MEDIA Radio Antenna Alignment

Dear Jim,

The following is a report and of observations and measurements made on June 15, 2021, on top of the US Bank at 233 South 13th Street, Lincoln, Lancaster County, Nebraska. Utilizing a CHC Model C220GR2 and the Topcon Hyper SR GPS antennas, observations were made to confirm 120 degrees from true North (Geodetic North). The center of the NRG MEDIA Radio Antenna was shot and another point was used to align the antenna at 120 degrees.

I hereby certify that the above determination was performed by me or under my direct personal supervision and that I am duly Licensed Land Surveyor under the laws of the State of Nebraska.

Lyle L. Loth, L.S.-314
