

## Nature of Amendment

---

This minor technical amendment is filed to update the *Antenna Location Data* section of the associated LMS Form 2100, Schedule 301 in order to correct the ground elevation and modify the overall structure height and the support structure height. The updated ground elevation reported herein also caused slight changes to antenna's proposed radiation center heights above mean sea level and above average terrain in the *Antenna Data* section of the associated FCC Form. No further changes are proposed herein. Because the proposed technical facility is largely the same as originally proposed, there are no discernible changes in the Exhibits filed with the original application.
