

**W233CG
MINOR MODIFICATION
ERP INCREASE TO 250W**

AMENDMENT

The W233CG application (0000149926) is amended to correct the Canadian exhibit. An increase in ERP to 250 Watts is requested. Exhibit E3 demonstrates that the 34 dBu (50:10) contour does not exceed 60 km toward Canada or over the border.

The modified W233CG translator will continue to rebroadcast WJMO(AM) (facility ID # 41389). The facility will remain at the licensed site and continue to comply with the “250 mile” rule with respect to its original site prior to the move.

Distance between

N Latitude 41 30 48.00, W Longitude 81 36 5.00 (Point 1)

and N Latitude 39 52 59.00, W Longitude 83 48 17.00 (Point 2)

259.720 kilometers; 161.382 miles

Allocations:

All exhibits utilize the Globe 30 second terrain database unless otherwise noted.

- E1 Channel study
- E2 Interference analysis to WQMX
- E3 Canadian analysis
- E4 Contours
- E5 ASR

A channel study is included as E1 demonstrating compliance with §74.1204 with the exception of 2nd adjacent channel station WQMX.

A plot of the proposed 60 dBu contour is provided as E4 showing that it is entirely contained within primary station WJMO’s 2 mV/m or 40 km radius.

WQMX analysis:

The proposed facility will be located inside the protected contour of WQMX on 235B. Interference analyses have been conducted based on the U/D ratio of +40 dB at the proposed site and are included as E2 and E2A-G. The buildings within the interference contour were thoroughly reviewed using Google Street View and the tallest are individually evaluated in exhibits E2A-E2G.

The 101.97 dBu (50:10) interference contour is at least 21 meters above ground within the first 190 meters from the tower. A street view of the closest buildings which are 2 stories at 23 meters is provided. The tallest building within the 190 meters radius is the six story stadium at a maximum height of 20 meters for a person in the highest stairwell (assuming 12 feet per story- see E1B for Google Street Views) located west of the tower at distances of 95 to 173 meters. At these distances the interfering contour clears the ground by 32.6 meters and clears the top of the stadium by at least 12.6 meters.

The tallest buildings outside the 190 meter radius are twelve (12) story buildings at a range of 340-720 meters from the tower.

The interfering contour over each of the six tallest buildings has been individually evaluated based on the actual antenna field in that direction. All other buildings identified were significant shorter than these.

(1) 12 story building at Euclid and Mayfield (N41-30-31.5 W81-36-20.8) is located at 627 meters at 215.6° azimuth. Its height is 43.9 meters or 41.7 meters for a person standing on the highest floor. The interference contour at that point is 48.3 meters AGL or 6.6 meters above the highest person (see E2A).

(2) The Seidman Cancer Center (N41-30-28 W81-36-21) is located at 720 meters and 211° azimuth. The interference contour is 55.2 meters AGL at that point or 13.3 meters above the highest occupied area of the nine story building assuming 16 feet per floor and a six foot person standing on the highest floor (see E2B).

(3) The Clarke Tower (N41-30-52 W 81-36-20) on the Case Western Reserve campus is at a distance of 369 meters at 289.7° azimuth. It is an eleven story residence hall of vintage construction. Assuming 12 ft floors and an 18 foot lobby, the highest occupied area for a standing six foot person would be 39.3 meters. The interference contour at this distance is 59.1 meters AGL. Therefore, the interference clears the highest occupied area by 19.8 meters. (E2C).

(4) The first apartment building on Mayfield road is at N 41-30-32.5 W 81-36-09.5 and 489 meters at 192.3° azimuth. The building is 12 stories or 43.9 meters or 41.7 meters to a six foot person standing on the top floor. The interference contour at this building is 49.4 meters AGL and clears the highest occupied area by 7.7 meters (E2D).

(5) One Triangle Place, a 12 story apartment building on Mayfield road, is located at N 41-30-32.3 W 81-36-12.6 or 515 meters at an azimuth of 200°. The interference contour at this point is 48.2 meters AGL or 6.5 meters above the highest occupied space (E2E).

(6) One Triangle Place building #2 is located within the interference contour at N 41-30-34.4 W 81-36-12.2 or a distance of 451 meters at 201.6° azimuth. The interference contour at this point is 50.7 meters AGL or 9 meters above the highest occupied space (see E2F).

It is clear from exhibits E2 and E2A-E2G that the interference contour will not reach any populated area or major highways. Based on this showing, a waiver of Section 74.1204 is requested in accordance with *Living Way Ministries, Inc.* (FCC 08-242).

Canada - §74.1235(d)(3):

The proposed 34 dBu F(50,10) interfering contour extends slightly north of the US-Canada border entirely over water within Lake Erie, but does not exceed the 60 km distance limit specified in 47 CFR § 74.1235(d)(3) toward Canada and it clears all Canadian land area (see E3). Therefore, the proposed facility would have no impact on any present or future Canadian FM broadcast facilities. The Commission has routinely granted such applications since 1998 (see for example W295DE - BMPFT-20160912AAX). If deemed necessary, a waiver of 47 CFR § 74.1235(d)(3) and/or Canadian referral is requested.

RF Exposure Calculation:

The proposed facility will utilize a six bay Bext TFC-2K full wavelength spaced, circularly polarized antenna with a center of radiation at 102 meters AGL on existing tower ASR #1014404. The RF contribution of the proposed translator was calculated based on a worst case F factor of 1.0 using the formula included below to be 1.67 μ Watts/cm² or 0.84% of the maximum permissible 200 microwatts/cm² exposure for general population/uncontrolled exposure, and well below the 5% of that limit which requires consideration. The proposed translator clearly complies with Commission RF radiation limits.

$$S \text{ (RF in } u\text{Watts/cm}^2) = \frac{33.4 \text{ (F}^2 \text{ Vertical Factor) } X \text{ (H ERP + V ERP in Watts)}}{R^2 \text{ (distance to radiation center in meters - 2 m)}}$$

Location (in NAD83 Coordinates)

Lat/Long	41-30-48.0 N 081-36-04.0 W	Address	11821 EUCLID AVE
City, State	CLEVELAND , OH		
Zip	44106	County	CUYAHOGA
Center of AM Array	Position of Tower in Array		

Heights (meters)

Elevation of Site Above Mean Sea Level	Overall Height Above Ground (AGL)
210.6	109.1
Overall Height Above Mean Sea Level	Overall Height Above Ground w/o Appurtenances
319.7	108.2

Painting and Lighting Specifications

FCC Paragraphs 1, 3, 12, 21
