

PURPOSE OF APPLICATION

This license application seeks to reduce the effective radiated power of the station with no change in antenna, height, location or operating frequency. The station remains a Class A facility and still provides 100% coverage of the community of license with the proposed 60dBu (50,50) contour.

This application is being made to accommodate a pending modification application by co-owned station KJRT, Amarillo. Since the facility herein is a satellite operation and fully simulcasts KJRT and no other technical changes are being made, it is believed that a formal application for Construction Permit would cause unnecessary administrative burden on the FCC staff.
