

KPHT-LP Explanation of Untimely Renewal

Licensee's FRN 0022914162 did not contain this facility KPHT-LP. The LMS appeared to have a utility in the front for adding stations to an FRN, but it did not work. So the licensee prepared a written version of the renewal and forwarded it timely to the FCC in Washington.

Subsequently, the station contacted Michael Couzens, communications counsel, and learned that the station could be associated with the correct LMS account by hand, by requesting this from the right FCC staff person.

Mr. Couzens requested this, it was done, and the licensee filled out the renewal, for filing about one week late.

Respectfully, licensee submits that it should in no way be punished or sanctioned, where LMS is required to be used for all renewals, and the LMS is so poorly designed that a new user would have no idea how to get its facility associated with the correct account.
