

**License to Cover Construction Permit BNPFT-20180502AAI**

W258DR – New Bedford, MA

FacID# 202288

**Special Operating Conditions**

1 – The tower upon which the W258DR antenna is mounted is approximately 1.1 km distant from co-owned AM station WBSM, New Bedford, MA. The WBSM antenna system is authorized pursuant to a directional proof of performance based on field strength measurements. In accordance with special operating condition 1, the permittee logged the pertinent WBSM antenna parameters and performed pre and post-construction measurements at the WBSM monitoring points in order to determine if the installation of the W258DR antenna had any measurable impact on the WBSM operating parameters or field strength values. No changes to the WBSM parameters or monitoring point field strength values attributable to the W258DR installation were noted. As such, the permittee believes it has satisfied special operating condition 1.

2 – The permittee is filing this instant application prior to the commencement of operation in accordance with special operating condition 2.

3 – The permittee will reduce power or cease operation as necessary to protect persons having access to the site, tower or antenna from radiofrequency electromagnetic fields in excess of FCC guidelines in accordance with special operating condition 3.

4 – W258DR will rebroadcast co-owned AM station WBSM as authorized and in accordance with special operating condition 4.
