

TECHNICAL EXHIBIT
APPLICATION FOR MODIFICATION OF
CHANNEL SHARING CONSTRUCTION PERMIT
CLASS A STATION KDJT-CD
SALINAS/MONTEREY, ETC., CALIFORNIA
CHANNEL 26 15 KW (MAX-DA)

1. Interference Compliance: It is proposed to operate KDJT-CD on channel 26 and operate from its current location with a DA maximum ERP of 15 kW. The proposed KDJT-CD operation will meet all interference protection requirements. The results of the *TVStudy* analysis are attached.

2. RFR Compliance: The proposed facilities were evaluated in terms of potential radiofrequency radiation (RFR) exposure at ground level to workers and the general public. The radiation center for the proposed DTV antenna will be located 82 meters above ground level. The total DTV ERP is 15 kW (horizontal polarization). A greater than expected vertical plane relative field value of 0.25 is presumed for the antenna's downward radiation (for angles below 60 degrees downward, see attached antenna information). The calculated power density at a point 2 meters above ground level is 4.9 uW/cm^2 which is 1.3% of the FCC's recommended limit of 363.3 uW/cm^2 for channel 26 for an uncontrolled environment. Therefore, based on the responsibility threshold of 5%, the proposal will comply with the RF emission rules.

Access to the transmitting site will be restricted and appropriately marked with RFR warning signs. Also, as this is a multi-user site, a formal RFR protection protocol is in effect in the event that workers or other authorized personnel enter the restricted area or climb the tower to ensure that appropriate measure will be taken to assure worker safety with respect to RFR exposure. Such measures include limiting the exposure time, wearing protective clothing, reducing power to an acceptable level or termination of transmitter output power all together until workers leave the restricted area.
