

This is to certify that the installation of (1) Nicom FM single bay antenna on the WBBT-AM tower, which serves as the WBBT-AM antenna, has had no effect on the operation or tuning of that structure. Base current readings before installation, at 1KW, was observed as 4.52 amps. After installation of the FM antenna, the base current reading was observed again, and remained at 4.52 amps at 1KW power. The before and after base resistance of the WBBT-AM antenna was recorded as 49 ohms.

With these indicators, I am certain that the installation of the FM antenna, has had no effect on the operational performance of the WBBT-AM antenna.

A handwritten signature in black ink, appearing to read "Buddy Wommack", with a stylized flourish at the end.

Buddy Wommack  
Chief Engineer  
WBBT-AM/WLYU-FM
