

PRIMARY STATION EXHIBIT

Sutton Radiocasting Corporation is the licensee for FM Translator Station W287CD and the proposed primary station it will repeat with the proposed facilities, WFSC(AM).

Presently, the primary station for W287CD is WNCC-HD Channel 4. WFSC(AM) will become the new primary station for the upgraded W287CD facility and will no longer serve as the primary station for W255CR when the upgraded facility is licensed so there will be no duplicated coverage area between W287CD and W255CR.

As depicted on the attached contour map, the entire proposed 60 dBu contour for W287CD is within 25 miles of the WFSC(AM) transmitter site. Therefore, WFSC(AM) qualifies as primary station for the upgraded W287CD signal.
