Bert- I was looking at the site brochure drawing last night, and it appears our current antenna at 494 ft isn't shown on that drawing. The drawing is dated 4/15/2014 but that antenna was installed in 2011.

I'm working with two different antenna prospects for that location. There is another channel 13 in Norcross which is making this process extremely difficult so I need to know what other items are in that area of the tower so I can look at face vs. leg mount, reducing AGL, etc. Anything you might have to better show the current mapping of that area would be helpful. I have some fairly recent pictures but they don't do very well at showing me what I really need to know.

Also, I have the leg diameters from 358.5' up to 448.5 but if we stay at the same COR I'll need those on up to 538.5'. My deadline to get back on is July 13; obviously I'm not going to make that but I need to be finished before my FCC construction permit expires in September.

Thank you,

**John Collinson**
