

W299DB CP Special Operating Conditions – FCC File Number 0000159457

The construction permit requests impedance measurements in accordance with Section 73.45 of the rules for Stations WLES(AM) Bon Air, VA and WXGI(AM) Richmond, VA. This requirement is anticipating the installation of an antenna on an AM broadcast tower supporting structure. However, in this case an existing antenna, coax, and iso-coupler were used. No changes were made on the tower. Only a combiner was added in the transmitter room to combine the W299DB signal into the existing antenna for W249CI Bellwood, VA - FAC ID 143583. As a result no changes were made to the AM broadcast system for either WLES(AM) or WXGI(AM). Therefore no impedance measurements are required and the special operating condition for W299DB is satisfied.

This application for license to cover the construction permit satisfies the other special operating condition on the CP.
