

**MINOR MODIFICATION OF CONSTRUCTION PERMIT**  
**DNV SPECTRUM HOLDINGS, LLC**  
**NEW, FI 182560, RENO, NV**  
**FCC FILE BNPDVL-20090825AOE**

1. The within application is for Minor Modification of the above-entitled CP to the following extent: 1. The ERP of the application is changed from 0.3 kW to 3.0 kW with a concomitant change of transmitter power on order to better cover the market. 2. The DTV output filter is changed to Full Service with the intent of operating the facility into a shared antenna with a co-owned channel 05 facility with the intent of better management of the adjacent channel interference resistance methodology; the channel 05 facility is filed with the same modifications for the same reasons. No other changes are planned.
2. The TV study, when run at 1.0 km pop squares and 0.1 km terrain intervals, yields information which shows that the within application shows no unacceptable interference to any other facility, application or permit. Any interference shown to the companion application on the adjacent channel sharing the antenna and tower site will be resolved in due course and the applicant for both channels will accept any such interference from its co-owned adjacent channel companion.
3. The facility meets environmental standards in that its NIER at ground level does not exceed the 5% limit for this service even when added to that of its co-owned adjacent channel companion facility. If necessary as protection for workers at the fenced and marked site, the applicant will turn off or turn down power while they are on site. No major construction is to be performed at the site; no AM station, either directional or nondirectional, is within the FCC-limited areas.
