

**St. Brigid Parish (the “Applicant”)**  
**Facility 768827**  
**Amended 11/30/2021**

#### **Amendment Purpose**

The amendment modifies the proposed technical parameters of the proposed station.

Specifically, the Applicant is proposed the use of a nondirectional antenna and a reduced authorized effective radiated power.

The Applicant is also requesting processing pursuant to 47 CFR 73.215.

#### **Section 73.215 Processing Discussion**

The proposed station is fully spaced pursuant to 47 CFR 73.207 to every other station on a non-reserved channel other than KTBT.

The instant application proposed a Class A facility. KTBT is a co-channel Class C2 station.

47 CFR 73.215(e) provides that processing utilizing the provisions of Section 73.215 is appropriate when the distance between a Class A and Class C2 is 89 kilometers or greater. Here, the distance between the station is 99.96 kilometers. Consequentially, processing pursuant to the provisions of 47 CFR 73.215 is appropriate.

The “Lack of Contour Overlap” exhibit that is attached to the amended application demonstrates the proposed facility will not create prohibited contour overlap to KTBT or any other station on a reserved channel.
