

W41DO-D, New York, NY

Facility #60554

Technical amendment of application 0000048498

Following the filing of the above referenced displacement application, Ventana Television discovered the proposal would cause interference in excess of the de minimis maximum to the maximization CP of WPSG-D. This maximization did not appear in the TV Study data immediately prior to the filing of Ventana's proposal.

This amendment is being filed to resolve that interference. It involves a change in antenna, azimuth pattern, vertical pattern, and ERP. A revised environmental statement is also attached. Since the original filing the list of parties to the application has changed somewhat so the revised list is attached.

Ventana acknowledges the requested channel (33) is not available until 08/02/2019 when all New York City stations repack and WCBS-TV completes its repack to channel 36.

Applicant requests the TV Study analysis of this proposal be run with a cell size of 0.5 km and a profile increment of 0.5 km.

This proposal is predicted to receive interference in excess of de minimis levels. Ventana agrees to accept this level of interference.

Ventana also requests dismissal of STA application #0000048518 as moot since WLNY-TV now holds an STA for that channel in that area.
