

**PURPOSE OF ENGINEERING STA**

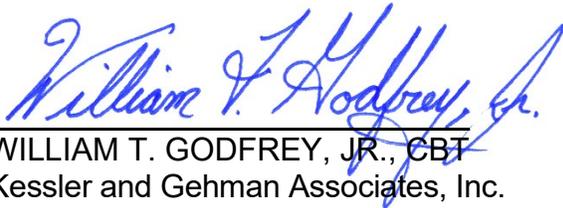

The purpose of this Engineering STA application is to allow the WMAE-DT facility to temporarily operate with alternate parameters on its post-transition channel (9) using a side-mounted directional interim antenna (TLS-V4-B) while the new post-transition main antenna is installed and the remaining portion of the repack-related buildout work is completed. The proposed WMAE post-transition interim facility will temporarily operate with alternate parameters that deviate from the station's post-transition authorization and will completely encompass its community of license with the F(50,90) 43.0 dBu principal community contour and will not exceed its authorized F(50,90) 36.0 dBu post-transition protected noise limited service contour in any azimuthal direction (see showing below).

**WMAE-TV Channel 9 License vs. WMAE-TV Channel 9 STA (TLS-V4-B)**

**CERTIFICATION**

This technical statement was prepared by William T. Godfrey, Jr., Engineering Associate with the firm Kessler and Gehman Associates, Inc. having offices in Gainesville, Florida, and has been working with the firm in the field of radio and television broadcast consulting since 1998. Mr. Godfrey was a graduate from the University of North Florida and a Distinguished Military Graduate from the University of Florida. As a Professional in the field of Telecommunications he states under penalty of perjury that the information contained in this report is true and correct to the best of his knowledge and belief.

A handwritten signature in blue ink that reads 'William T. Godfrey, Jr.' with a stylized flourish at the end.
